FastLine

1. Fuse protection

Fuse protection – Easy and reliable

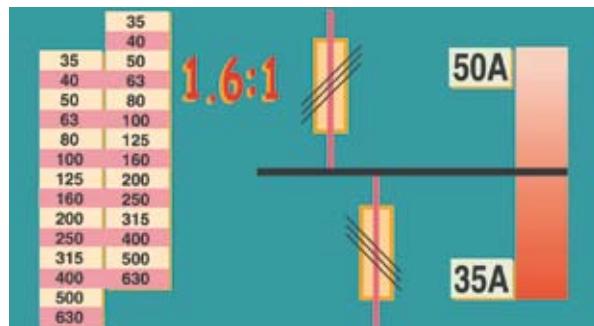

The fuse is a superior short circuit protection element regarding the maximum allowed cut-off current (peak let through current) and energy value.

This is more important the higher the voltage and prospective fault levels are. The FastLine switch fuses fulfil the highest requirements for modern switch fuses with a total safety concept. The switch fuses are tested according to the EN 60947-3 standard with more stringent requirements for isolation, making, performance and safety. The fuse rails are tested according to IEC 60269-2-1.

The melting curves and current limiting diagrams for NH fuse links are given in the IEC 269-2 standard. The standardised fuse characteristics and high degree of current limitation ensure that there is a simple and effective co-ordination with fuse links and other devices.

Fuse links provide a simple procedure for selecting the right fuse type for your installation, without complicated calculations or calculation tools. Fuses prevent "blackouts". Only the fuse nearest a fault trips without upstreams fuses (feeders or mains) being affected. Fuses thus provide selective coordination.

When more power is needed in an installation, more feeders can be added without changing the present structure or any new selectivity calculations. Fuse links will assure selectivity in the installation by 1,6:1 difference in the rated current.

No need for calculation tools

- Easy and economical selectivity

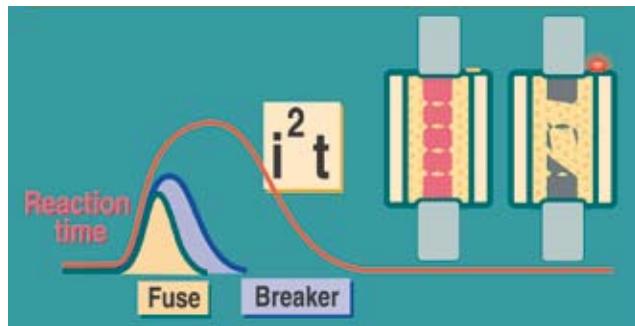

Economical installation

Lifetime costs of fuse systems are low. Fuse links which can withstand a high fault level and a fault current, are available at economical prices. After fuse operation, only the fuse link has to be changed.

Because the fuse links can be rapidly and easily replaced, plant down time and maintenance are substantially reduced with a fuse link system.

Because the fusing elements operate in a cylinder, they are not affected by their surroundings. Thus their protecting characteristics remain stable year after year. The dynamic stress on the network and its equipment is dependent of the let through energy (i^2t) at a short circuit. The fuse link provides the best protection compared to other solutions, at high short circuit currents.

As the fuse link body is filled with quartz sand, there will be no emission of gases or arcs when a short circuit occurs. This again leads to less stress on the network and a higher degree of personal safety.

No moving parts

- No extra operation time

Fuse protection – Easy and reliable

- Economical installation
- Easy and economical selectivity
- No need for calculation tools
- No need to change the present structure when more power is needed
- No moving parts
- No extra operation time
- No arc space
- No emission of gasses at short circuits

FastLine

2. General

The distribution system FastLine is a modular system consisting of a busbar assembly plate with plug in modules as incomer and outgoing circuits.

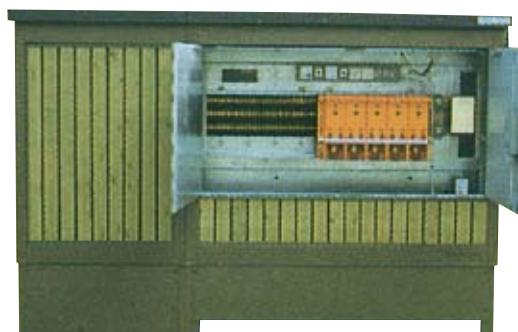

Properties of FastLine

- Complete distribution system up to 2500 A
- Very fast and easy assembly
- Modular design
- Personal safety, IP 20
- Modern cable connection technology for Al and Cu cables
- Integrated IP 20 degree of protection
- Flexibility by use within several areas
- Type tested in accordance with IEC / EN 60947- 3
- Developed and produced in accordance to ISO 9001
- Easy to recycle in accordance with ISO 14001 standards

Areas of application

- Cable distribution cabinets (CDC)
- Installation
- Low voltage distribution in transformer substations
- Switchboards for industry, housing and office buildings
- FastLine is also approved for horizontal assembly

FastPlan (software for FastLine)

FastPlan is a software for planning and document applications where FastLine/ SLK is being used. With FastPlan you have the possibility to make a fast and simple arrangement where the result is:

- Front view drawing
- Single line diagram
- Material list

These can all be printed and used for documentation, requests, offers, orders or circuit list in cabinets, secondary substations or installations.

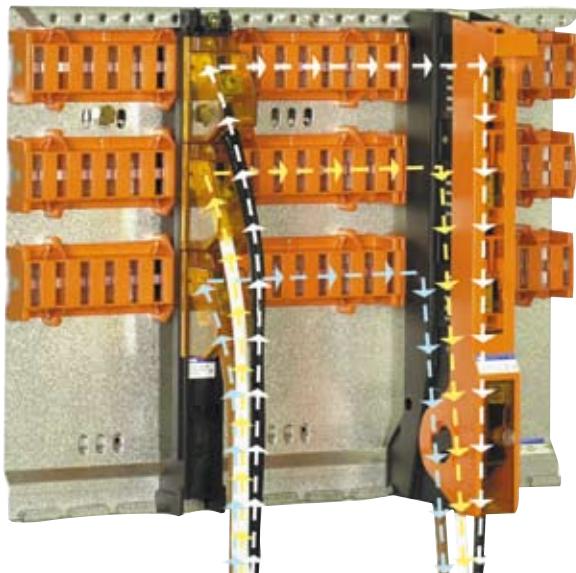

FastPlan may be installed on PC's having Windows® 95/ 98/ 2000/ NT or XP operating system (NB! not for Vista). One of the challenges of distributing software has been to keep track of the users and ensure that the latest program updates are being sent out.

In FastPlan we will solve this problem by sending out the first release on a CD. All future updates will automatically be made via the Internet. FastPlan is available free of charge and may be used by both sales people and customers.

FastLine

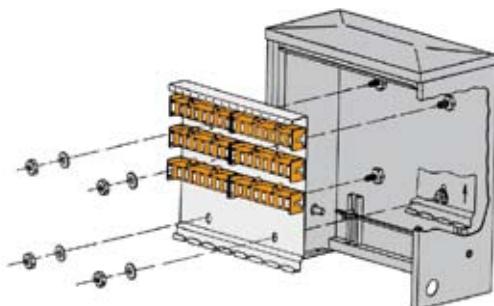

3. Description

FastLine - A LEGO system for the smart engineer

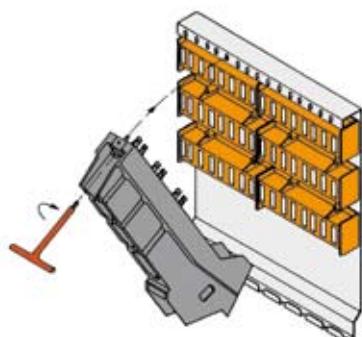

The FastLine distribution system is a modular system consisting of :

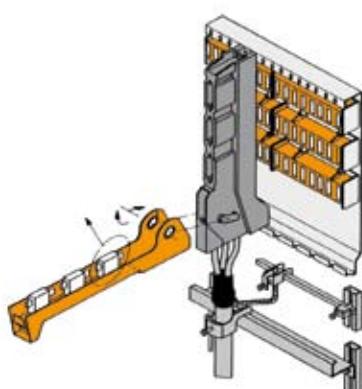

- Busbar assembly plates type FS, FD, FM, FF or FST
- Direct incomer modules
- Incomer modules with disconnecting function
- Fuse switch disconnector modules
- Fuse switch modules, single poles
- SLK- E adapters for T-max

1: FS busbar assembly plate
bolted into a cable distribution cabinet

2: Plug the module into the FS, FD,
FM or FST busbar assembly plate

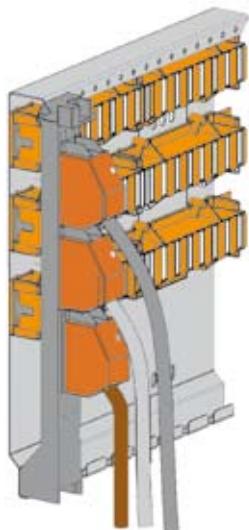

3: Connect the cables
4: Hook the front cover with fuses on the
base and switch in to ON position

FastLine

3. Description

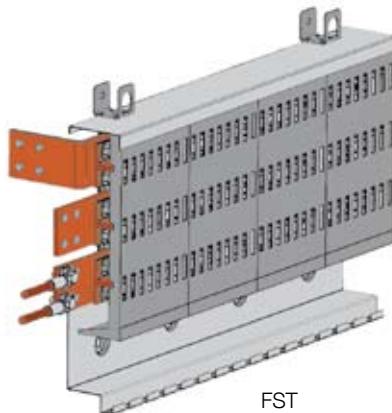

FS, 400 - 630 - 1200A

FS, FD, FM

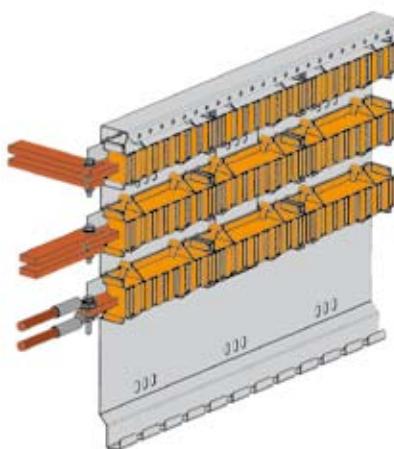

- From front by use of:
- Direct incomer modules
 - With or without disconnecting function
 - Circuit breaker in adapter
 - Fuse switch disconnector

FST, 1200 - 1600 - 2500A

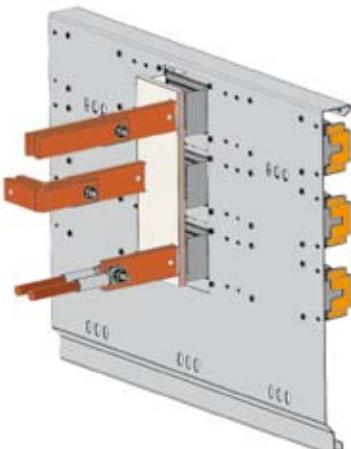

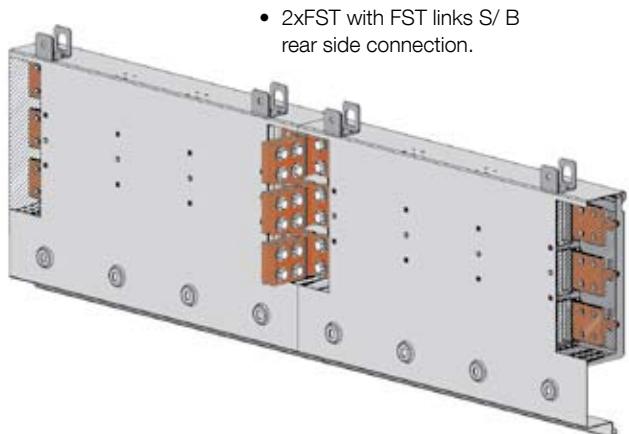

FST

- From front by use of:
- Direct incomer modules
 - With or without disconnecting function
 - Circuit breaker in adapter
 - Fuse switch disconnector
 - FST-links

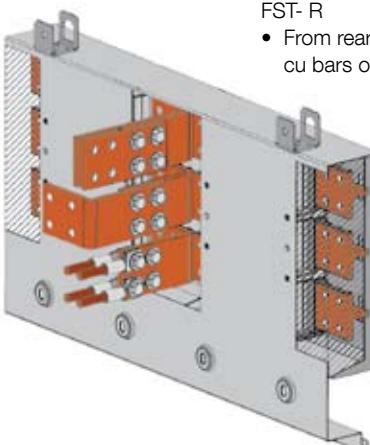

FS - SR/ SL

- From side R (right) or L (left) by your own cu-bars or cables.

FS - R

- From rear side by your own cu-bars or cables.

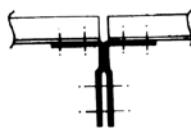

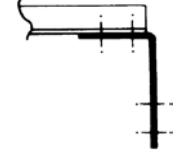

FST - R

- From rear side by your own cu-bars or cables.

The adapters are designed for mounting the Tmax circuit breaker range from ABB SACE. All adapters are delivered as empty units for mounting the Tmax circuit breaker locally by the end user.

The range of FastLine Tmax adapters are available in 3-pole version for T2, T4, T5, T6 and T7 and 4-pole version for T2, T4, T5 and T6. A new range of 4 pole IP 20, FST-assembly busbar plates has been developed for these 4 pole adapters. These assembly plates have ratings 1200A and 1600A and are available in 800mm and 1200mm widths.

FastLine

5. Applications

FastLine in Cable Distribution Cabinets

For the FastLine system, ABB can supply either steel or polyester cable distribution cabinets.

Polyester cable distribution cabinets

ABB's cable distribution cabinets (CDC) are made of reinforced polyester and satisfy DIN 43629 Parts 1 and 3, and IEC 439-5. They are available in four different widths to take FastLine assembly plates sizes 400, 500, 700 and 1000 mm. The cable distribution cabinet consists of one upper part (cabinet) and a lower part (base). The cabinet has a lockable, side hinged door which can be opened approx. 160 degrees. For further details, please see catalogue 1SEC320001B0201.

Steel cable distribution cabinets

The steel cable distribution cabinet (CDC) family consists of 5 different widths.

The upper part is available in two versions:

- made of hot galvanized steel plate.
- made of aluzinc steel plate and painted (green RAL 6012).

The lower part with foundation can also be delivered in stainless steel.

The front door can easily be removed.

To get access to the PE/PEN bar and the top part of the cable joint, a cover situated below the door has to be lifted and removed.

FastLine

5. Applications

FastLine in Secondary Substations

Direct connection

Transformer – FST

Easy access to arrange bolted connection with standard Cu-bars to the FST Busbar assembly plate by:

- removing left or right IP 20 front shroud from the FST Busbar assembly plate
- and remove the transparent side protection shroud

Switched connection

Different complete **FST-OETL Installation kits** are available to connect a switch disconnector type OETL as a switchable incomer to the Busbar assembly plate type FST.

The kits are suitable for:
OETL 1000 K3 / 1250 K3 and 1600 K3.

The FST-OETL Installation kits include:

- Cu-links between FST-OETL
- Distance pieces for cable connection (when cable kit)
- Bolts / nuts / distance pieces / washers
- OETL Protection cover

Alternative feeding for Switched connection:
Transformer – OETL –FST
