ARPEX

High Performance Couplings

Catalog MD 10.2 · 2013

Dear customer,

We are pleased to present you with the new Catalog MD 10.2 which supersedes Catalog MD 10.9. In it you will find everything you need to know about the latest range of FLENDER high performance couplings:

- Series ART – type XVX: For exacting requirements of the position of the center of gravity
- Series ART – type BVB: For average requirements of the position of the center of gravity
- Series ART – type MHM: For large shaft diameters
- Series ARE – type MHM: For medium-speed drives

All FLENDER high performance couplings are of course maintenance-free and wear-free. They offer the same performance and availability characteristics which for many years have been the bedrock of FLENDER's unequalled reputation as a coupling supplier.

We hope that you will often enjoy using Catalog MD 10.2 as a reference for placing new orders and look forward to receiving your queries about our products.

We will be glad to receive your suggestions and recommendations for improvement (please make reference to the catalog name) under catalogs.industry@siemens.com.

For the latest information and catalogs on the Internet, please go to www.siemens.com/couplings

Best regards,

Answers for industry.

Siemens Industry answers the challenges in the manufacturing and the process industry as well as in the building automation business. Our drive and automation solutions based on Totally Integrated Automation (TIA) and Totally Integrated Power (TIP) are employed in all kinds of industry. In the manufacturing and the process industry. In industrial as well as in functional buildings.

Siemens offers automation, drive, and low-voltage switching technology as well as industrial software from standard products up to entire industry solutions. The industry software enables our industry customers to optimize the entire value chain – from product design and development through manufacture and sales up to after-sales service. Our electrical and mechanical components offer integrated technologies for the entire drive train – from couplings to gear units, from motors to control and drive solutions for all engineering industries. Our technology platform TIP offers robust solutions for power distribution.

Check out the opportunities our automation and drive solutions provide. And discover how you can sustainably enhance your competitive edge with us.

Benefits

ARPEX high performance couplings have been specially designed for use in high-speed applications. Created by designers with decades of experience using state-of-the-art development and manufacturing tools, ARPEX high performance couplings offer a dependable high-end solution for torsionally rigid torque transmission even with shaft misalignment.

The couplings are suitable for use in potentially explosive atmospheres in accordance with 94/9/EC and comply with the requirements of API 671/ISO 10441.

ARPEX high performance couplings can withstand temperatures between -40 °C and +280 °C in operation. On request they can also be specially equipped for use in other temperature ranges.

Application

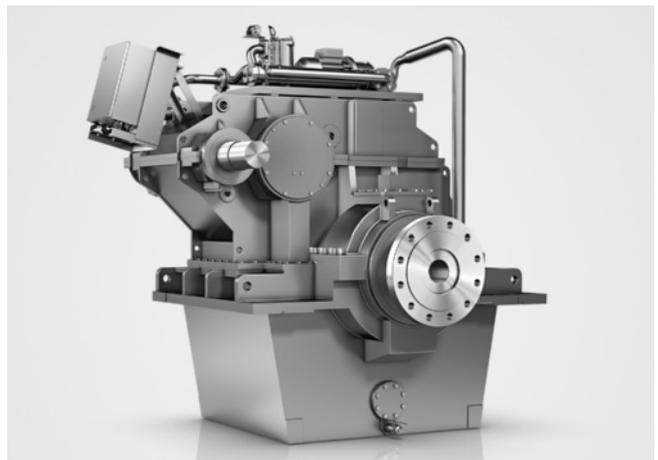

Generator drives

Boiler feed pumps

Gas and steam turbines

Marine drives

Turbo compressors

Test stands

Characteristic Features

Application (continued)

ARPEX high performance couplings from the ART and ARE series transmit torque by means of a patented¹⁾ conical screw connection and a hexagonal, octagonal or decagonal plate pack. They are suitable for torques ranging from 1 000 Nm to 588 500 Nm with a maximum permissible angular misalignment of between 0.16 ° and 0.35 °. The high-quality materials and compact design of the couplings make them light in weight, but capable of high peripheral speeds and torques.

Main areas of application, particularly in the oil and gas industries, the petrochemical industry and in the maritime field:

- Generator drives
- Gas and steam turbines
- Turbo compressors
- Boiler feed pumps
- Marine drives
- Test stands

Characteristics of the ARPEX ART and ARE high performance couplings:

- No lubrication necessary
- Backlash-free torque transmission thanks to plate packs with patented¹⁾, positive-locking conical screw connection
- Design in accordance with API 671/ISO 10441
- Easy to install with factory-assembled half couplings
- Compact, weight-optimized design
- Low restoring forces
- High balancing quality
- Couplings can be designed for potentially explosive environments in accordance with 94/9/EC

ARPEX coupling optionally suitable for operation in potentially explosive environments.

Complies with Directive 94/9/EC for:

CE  II 2G T2/T3/T4/T5/T6
 $-40\text{ °C} \leq T_a \leq +230\text{ °C}/+150\text{ °C}/+85\text{ °C}/+50\text{ °C}/+35\text{ °C}$

CE  II 2D T +120 °C $-40\text{ °C} \leq T_a \leq +70\text{ °C}$

CE  I M2

¹⁾ Protected by patent in a number of countries on the date of creation of this catalog.

Design

2 different series and 3 different types of the ARPEX high performance couplings are available. The series are differentiated according to the number of plate pack screw connections used, i.e. they feature either a hexagonal, an octagonal or a decagonal plate pack.

The version with six connecting elements allows the largest radial and axial shaft misalignment thanks to the high flexibility of the hexagonal plate pack design. This version is thus especially suitable for applications involving a large degree of thermal expansion.

The version with octagonal plate pack combines high torque capacity with high flexibility and thus offers a perfect solution for most high-speed applications.

The version with decagonal plate pack provides the highest torque capacity with small shaft misalignment and is thus especially suitable for applications with high peak torques and low misalignment requirements.

The types are differentiated according to the following features:

The compact, "reduced moment" XVX type minimizes the bending moment stress on the connecting shafts.

Type BVB is a lower-cost version of type XVX and is suitable for applications with lower requirements of the moment stresses on the connecting shafts.

Type MHM is designed for use with larger shaft diameters.

The ARE series couplings have been developed for use on medium-speed drives. They are a low-cost, light-weight version with high torque capacity.

All versions can also be supplied with flange connections to meet the customer's specifications.

The materials used to manufacture the high performance couplings have been carefully selected and the coupling geometry has been optimized using state-of-the-art FEA-based analysis.

All hubs, flanges, sleeves and plate pack screw connections are made of high-grade tempered steel. The highly flexible plates are made from stainless steel spring steel and generate very low restoring forces at the bearings. The patented¹⁾ conical plate pack screw connection permits positive-locked torque transmission. The intermediate spacers can be dismounted radially without moving the coupled machines.

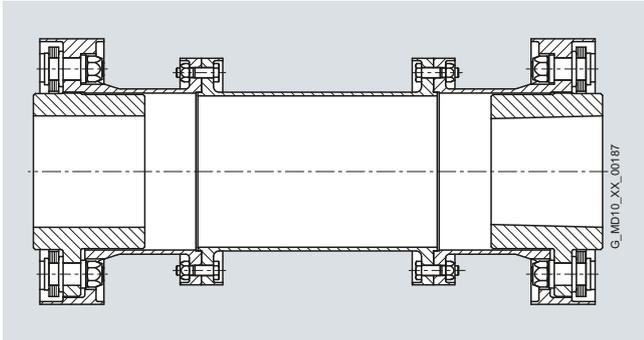

The couplings meet the requirements of API 671/ISO 10441.

¹⁾ Protected by patent in a number of countries on the date of creation of this catalog.

Design**Plates**

Plate shapes

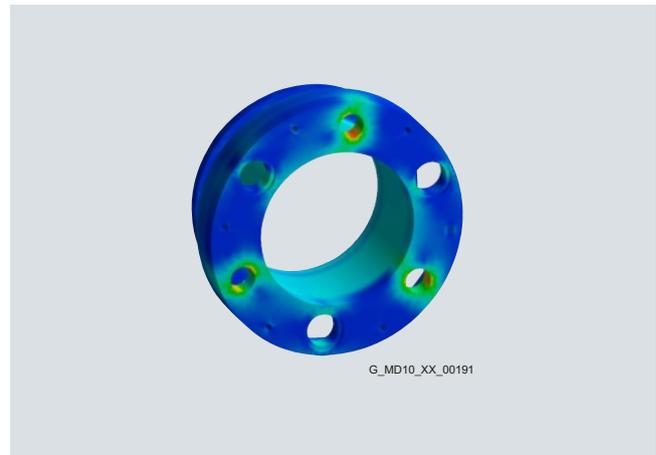

The operating principle of ARPEX high performance couplings is based on the flexibility of the plate packs. The plate packs combine high flexibility with high torque capacity. This means that torque is reliably transmitted even when shaft misalignments cannot be avoided.

The plates are made of hard-rolled spring steel which is stainless and has an extremely high tensile strength.

The use of very thin individual plates means that the restoring forces induced by shaft misalignment are comparatively low. This has a positive impact on the bearing service life of the coupled machines.

The scalloped design of the plates ensures even distribution of stress in the plates and also reduces the weight and the moment of inertia of the plates.

The plates are designed for unlimited service life with a high degree of operational safety.

FEA – development of ARPEX high performance couplings

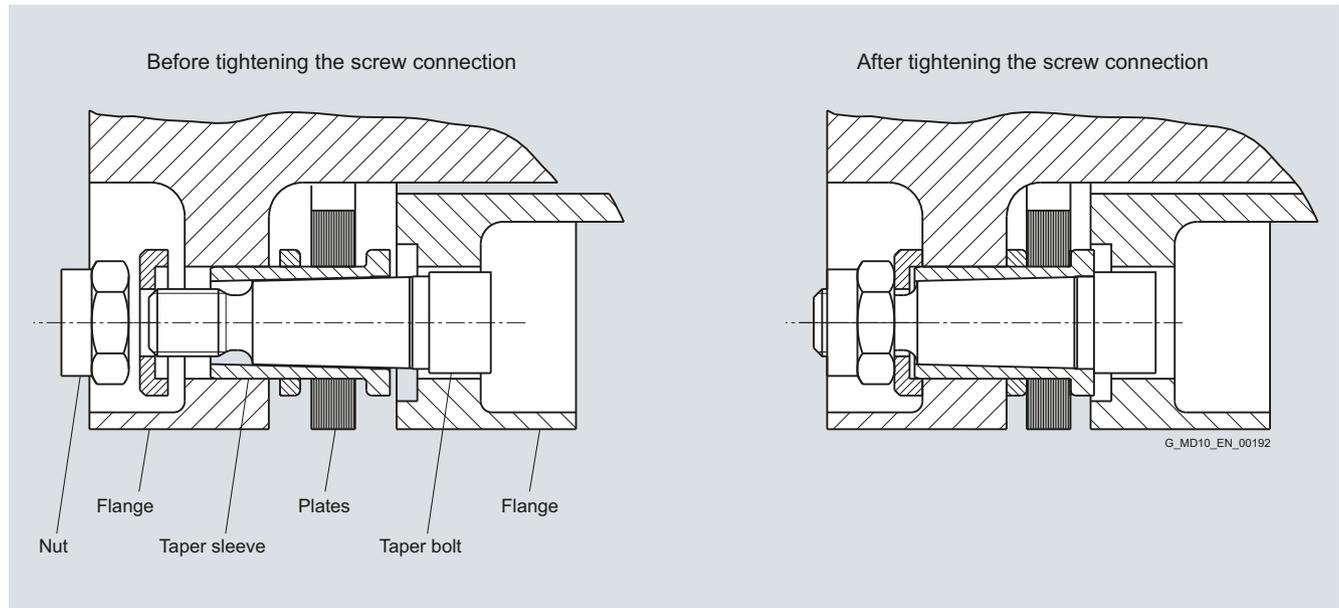

Stress distribution according to the Finite Element Analysis (FEA)

The weight, stiffness and stress distribution of all components of the ARPEX high performance couplings are optimized by FEA analysis. Extensive series of tests have been carried out in order to verify these FEA results and to assess the service life of the components with respect to fatigue life and fatigue limit.

Conical Plate Pack Screw Connection

Design

Patented¹⁾ conical screw connection

Design of the conical screw connection

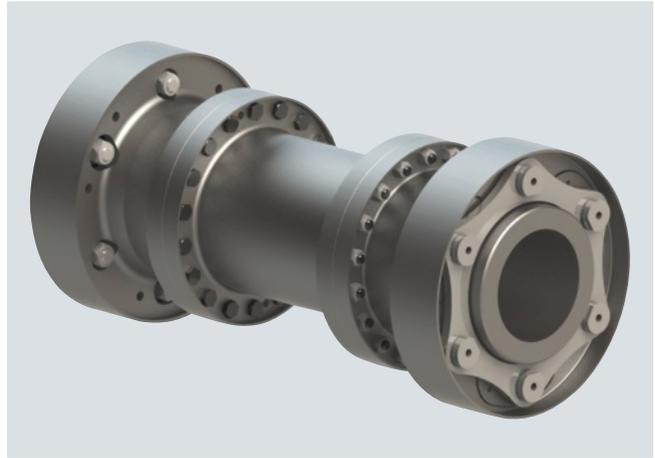

Advantages of the patented¹⁾ conical screw connection

- **Positive-locked torque transmission**
The main advantage of the conical screw connection over the use of close-fitting bolts is the creation of a real positive lock inside the plate pack screw connection. The positive lock is provided by expansion of the conical connection.
- **Functioning principle**
The taper bolt is pulled into the taper sleeve when the nut is tightened, causing the sleeve to expand. As a result, a positive backlash-free connection is reliably created between the taper bolt and the sleeve as well as between the sleeve, the flange and the plates.
This contrasts with typical plate pack screw connections which use close-fitting bolts to transmit torque by friction.
- **Light weight**
While providing the same torque capacity, the conical screw connection is lighter and has a lower moment of inertia than a close-fitting bolt connection.
- **Centering**
The centering accuracy attained by the use of the conical screw connection is exceptionally high, thus also ensuring high balancing quality.
- **Material**
All components of the screw connection are made of high-grade tempered steel.

¹⁾ Protected by patent in a number of countries on the date of creation of this catalog.

Overview

- The coupling components are arranged in such a way as to minimize the moment stresses on the connecting shafts; ideally suited for turbine compressor drives with exacting requirements with respect to the position of the center of gravity and the weight of the half coupling
- The "X" subassemblies are preassembled at the factory. The spacer "V", which can be separately mounted or removed, can be installed radially in such a way that there is no need to move the driving or the driven machine. As a result, the coupled machines can be separated quickly.
- The spacer length of the coupling is variable. It is also possible to adjust the torsional spring stiffness to suit individual applications.
- Reduced-windage design

Series ART High Performance Couplings

¹⁾ The maximum speeds n_{\max} might be lower in the case of spacers with a DBSE dimension in excess of 457.2 mm (18").

²⁾ The following specifications relating to weight, mass inertia and torsional spring stiffness refer to a coupling of standard dimensions with maximum hub bores and a DBSE dimension of 457.2 mm or the dimension S_{\min} if $S_{\min} > 457.2$ mm.

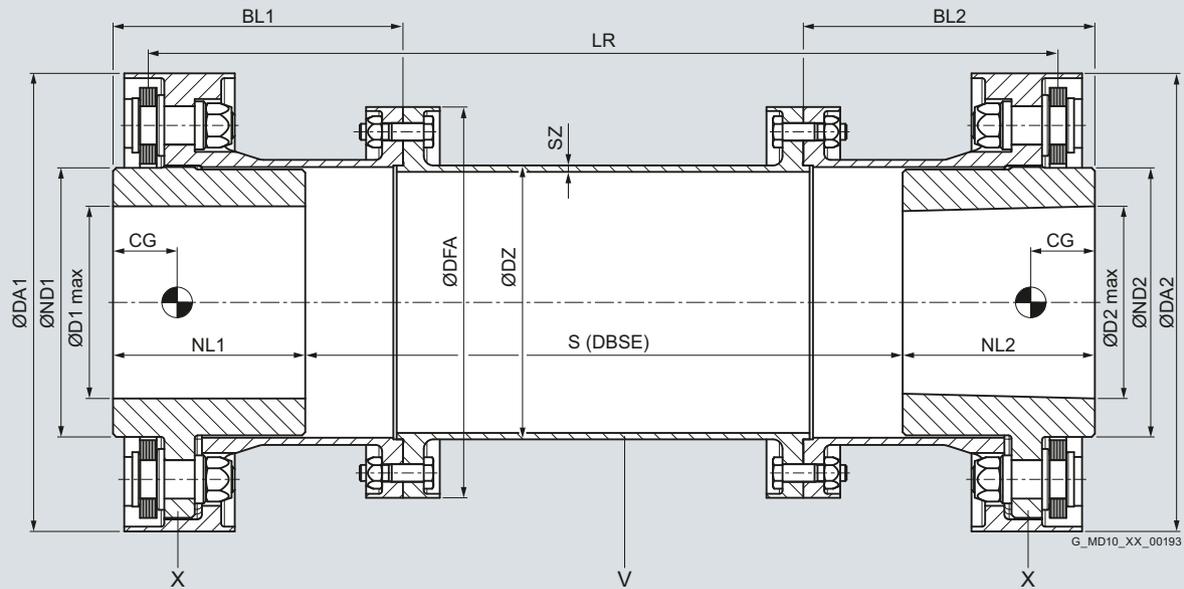

The permissible radial misalignment can be calculated using the following equation:

$$K_r = \tan K_w \times LR$$

$$K_r, LR \text{ in mm; } K_w \text{ in } ^\circ$$

T_{KN}	Rated coupling torque
T_{peak}	Maximum permissible torque for 10^3 load changes
$n_{k \max}$	Maximum permissible coupling speed
CG	Position of center of gravity
M	Mass
J	Moment of inertia
C_T	Torsional stiffness
$K_{a \max}$	Permissible axial misalignment (for complete coupling)
$F_{a \max}$	Maximum axial force (for complete coupling)
$K_{w \max}$	Permissible angular misalignment

¹⁾ The hub bore and hub length are standard dimensions. Please contact your Siemens representative for information about special applications.

²⁾ The LR dimension refers to a DBSE dimension of 457.2 mm or the dimension S_{min} if S_{min} > 457.2 mm.

Series ART High Performance Couplings

Type MHM

Overview

- The hubs "M" of this coupling design have a larger bore capacity than the BVB type. The MHM type variant is thus used for applications involving large shaft diameters such as electric motors or generator drives
- The factory-mounted subassembly "H" can be installed or removed radially in such a way that there is no need to move the driving or the driven machine. As a result, the coupled machines can be separated quickly for maintenance purposes.
- The flanges of the subassembly can also be adapted to the flange shafts of large gas and steam turbines.
- The spacer length of the coupling is variable. It is also possible to adjust the torsional spring stiffness to suit individual applications.
- Reduced-windage design

Series ART High Performance Couplings

Type MHM

Technical data

The following specifications relating to weight, mass inertia and torsional spring stiffness refer to a coupling of standard dimensions with maximum hub bores and a DBSE dimension of 457.2 mm or the dimension S_{\min} if $S_{\min} > 457.2$ mm.

Please contact your Siemens representative for information about special applications.

¹⁾ The maximum speeds n_{\max} might be lower in the case of spacers with a DBSE dimension in excess of 457.2 mm (18").

²⁾ The following specifications relating to weight, mass inertia and torsional spring stiffness refer to a coupling of standard dimensions with maximum hub bores and a DBSE dimension of 457.2 mm or the dimension S_{\min} if $S_{\min} > 457.2$ mm.

The permissible radial misalignment can be calculated using the following equation:

$$K_r = \tan K_w \times LR$$

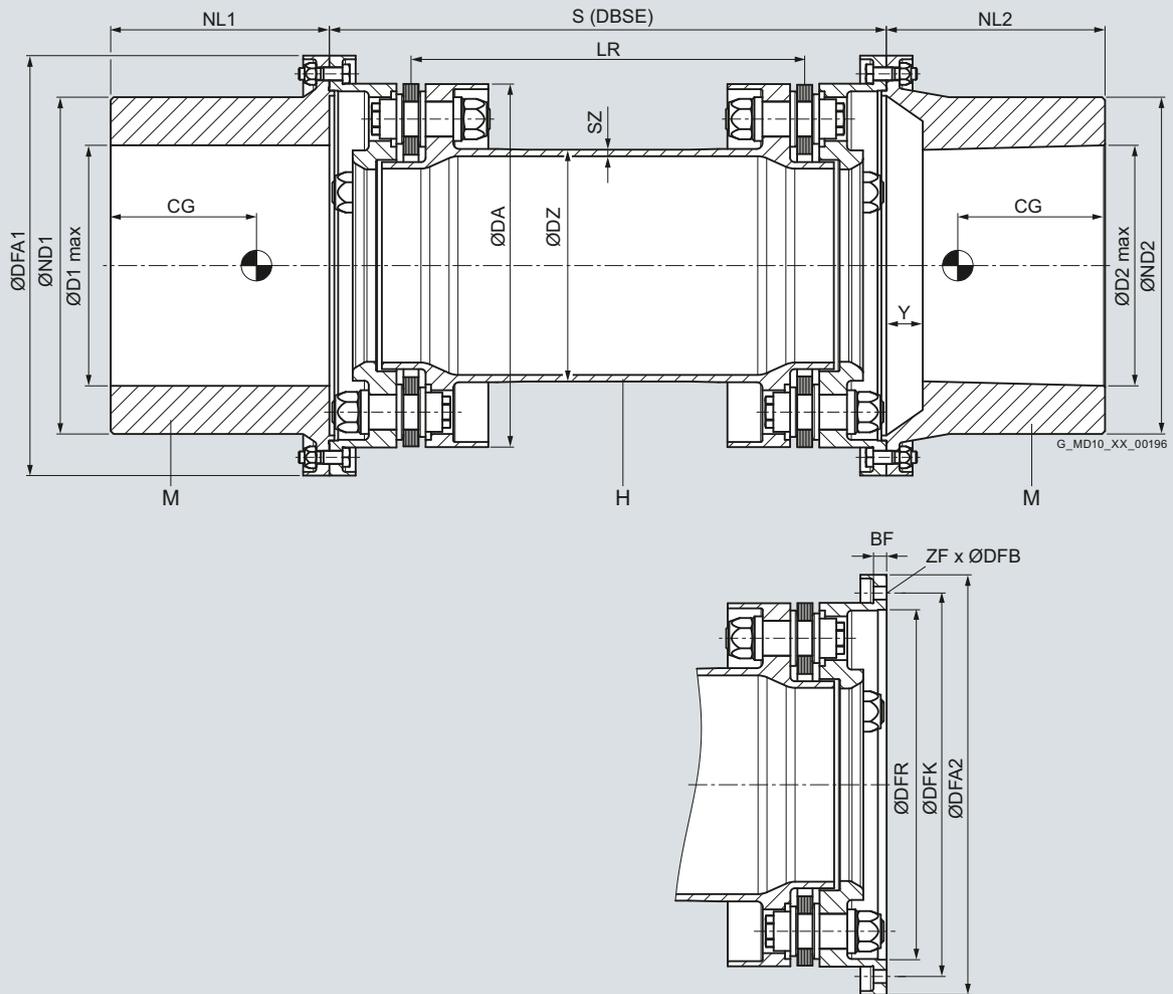

$$K_r, LR \text{ in mm; } K_w \text{ in } ^\circ$$

T_{KN}	Rated coupling torque
T_{peak}	Maximum permissible torque for 10^3 load changes
$n_{k \max}$	Maximum permissible coupling speed
CG	Position of center of gravity
M	Mass
J	Moment of inertia
C_T	Torsional stiffness
$K_{a \max}$	Permissible axial misalignment (for complete coupling)
$F_{a \max}$	Maximum axial force (for complete coupling)
$K_{w \max}$	Permissible angular misalignment

¹⁾ The hub bore and hub length are standard dimensions. Please contact your Siemens representative for information about special applications.

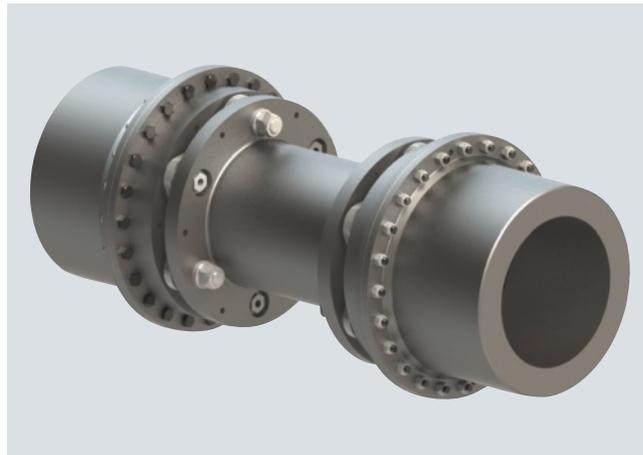

²⁾ The LR dimension refers to a DBSE dimension of 457.2 mm or the dimension S_{min} if S_{min} > 457.2 mm.

Series ARE Couplings for Medium-Speed Drives

Type MHM

Overview

- The ARE series has been developed for medium-speed drives with exacting requirements with respect to the coupling half weight.
- The factory-mounted subassembly "H" can be installed or removed radially in such a way that there is no need to move the driving or the driven machine. As a result, the coupled machines can be separated quickly for maintenance purposes.
- The flanges of the subassembly can also be adapted to large flange shafts.
- The spacer length of the coupling is variable. It is also possible to adjust the torsional spring stiffness to suit individual applications.

Technical data

The following specifications relating to weight, mass inertia and torsional spring stiffness refer to a coupling of standard dimensions with maximum hub bores and a DBSE dimension of 457.2 mm or the dimension S_{\min} if $S_{\min} > 457.2$ mm.

Please contact your Siemens representative for information about special applications.

¹⁾ The hub bore and hub length are standard dimensions. Please contact your Siemens representative for information about special applications.

²⁾ The LR dimension refers to a DBSE dimension of 457.2 mm or the dimension S_{min} if S_{min} > 457.2 mm.

Axial and Angular Misalignment

Characteristics

Axial shaft misalignment as a function of angular misalignment

Technical Information

Overview

Balancing

It is basically possible to balance the couplings according to any of the methods described in API 671/ISO 10441, in accordance with DIN ISO 1940 Part 1 or in compliance with similar standards/regulations.

The following options are provided by API 671:

- Component balance (individual balancing of all components) with the possibility of exchanging identical parts
- Assembly check balance to verify the balance of individual components, balance can be corrected only by repeating the component balance; individual components can be assembled in any position
- Assembly check balance with balance correction of the complete coupling; none of the individual components can be exchanged

Transport and assembly aid

The plate packs are immobilized by means of shipping screws for the purpose of balancing, transportation and assembly. These screws protect the plates against damage during transportation or assembly.

It is absolutely essential to remove the shipping screws before the coupling is commissioned.

Axial pretensioning

If it is known in advance that the shaft distance has changed, e.g. as a result of thermal expansion, it is possible to axially pretension the plate packs so that the coupling remains in a neutral position during operation.

Shim packs

The couplings for tapered hub bores are supplied with shim packs. These allow the shaft distance to be corrected by +/- the thickness of one pack.

Shaft-hub connection

ARPEX high performance couplings are normally designed with tapered bores for hydraulic oil assembly or disassembly. Flange versions are also available.

Detailed information must be supplied to ensure accurate design of the hub bores or flanges.

Safety precautions

The purchaser must take measures to prevent any accidental contact with rotating parts.

Assembly and removal of the couplings

All types of ARPEX high performance couplings are designed such that there is no need to move the couplings and coupled machines axially during assembly/removal of the couplings.

Assembly and commissioning

ARPEX high performance couplings must be assembled and commissioned in accordance with Operating Instructions BA 8706, a copy of which is enclosed with every shipped coupling unit.

As-supplied condition

ARPEX high performance couplings are shipped as complete coupling units with preassembled plate packs.

Type XVX is shipped with preassembled "X" subassemblies.

Type BVB is shipped with preassembled "B" subassemblies.

Type MHM is shipped with preassembled "H" subassembly.

These coupling components must not be disassembled without prior consultation with Siemens AG.

Technical changes

Dimensions and technical data might change as a result of future product developments.

Partners at Industry Automation and Drive Technologies

SIEMENS

Partner at Industry Automation and Drive Technologies

At Siemens Industry Automation and Drive Technologies, more than 85,000 people are resolutely pursuing the same goal: long-term improvement of your competitive ability. We are committed to this goal. Thanks to our commitment, we continue to set new standards in automation and drive technology. In all industries – worldwide.

Appendix Online Services

Information and Ordering in the Internet and on DVD

Siemens Industry Automation and Drive Technologies in the WWW

A detailed knowledge of the range of products and services available is essential when planning and configuring automation systems. It goes without saying that this information must always be fully up-to-date.

Siemens Industry Automation and Drive Technologies has therefore built up a comprehensive range of information in the World Wide Web, which offers quick and easy access to all data required.

Under the address

www.siemens.com/industry

you will find everything you need to know about products, systems and services.

Product Selection Using the Interactive Catalog CA 01 of Industry

Detailed information together with convenient interactive functions:

The interactive catalog CA 01 covers more than 80 000 products and thus provides a full summary of the Siemens Industry Automation and Drive Technologies product base.

Here you will find everything that you need to solve tasks in the fields of automation, switchgear, installation and drives. All information is linked into a user interface which is easy to work with and intuitive.

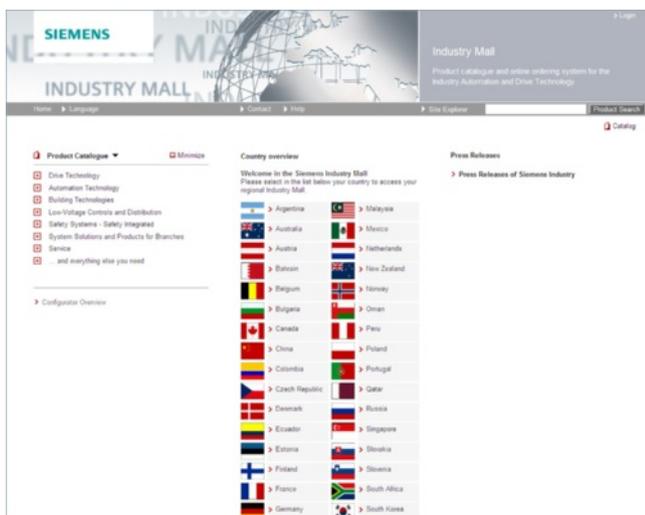

After selecting the product of your choice you can order at the press of a button, by fax or by online link.

Information on the interactive catalog CA 01 can be found in the Internet under

www.siemens.com/automation/ca01

or on DVD.

Easy Shopping with the Industry Mall

The Industry Mall is the virtual department store of Siemens AG on the Internet. Here you have access to a huge range of products presented in electronic catalogs in an informative and attractive way.

Data transfer via EDIFACT allows the whole procedure from selection through ordering to tracking of the order to be carried out online via the Internet.

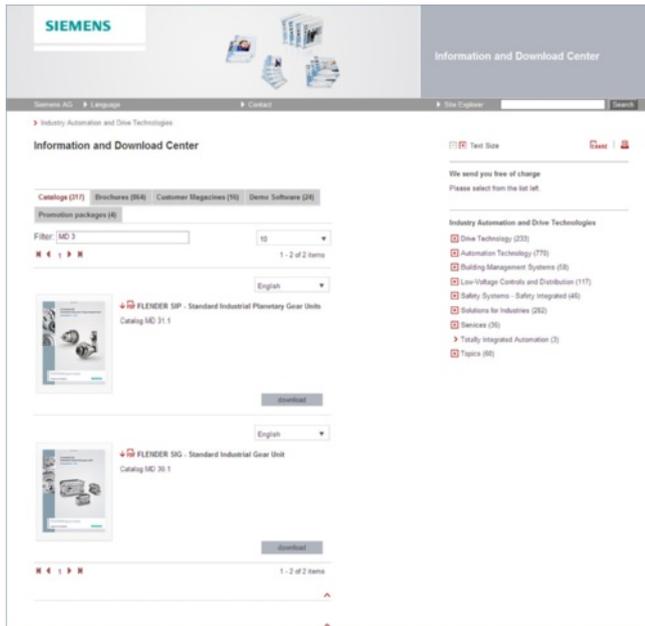

Numerous functions are available to support you.

For example, powerful search functions make it easy to find the required products, which can be immediately checked for availability. Customer-specific discounts and preparation of quotes can be carried out online as well as order tracking and tracing.

Please visit the Industry Mall on the Internet under:

www.siemens.com/industrymall

Downloading Catalogs

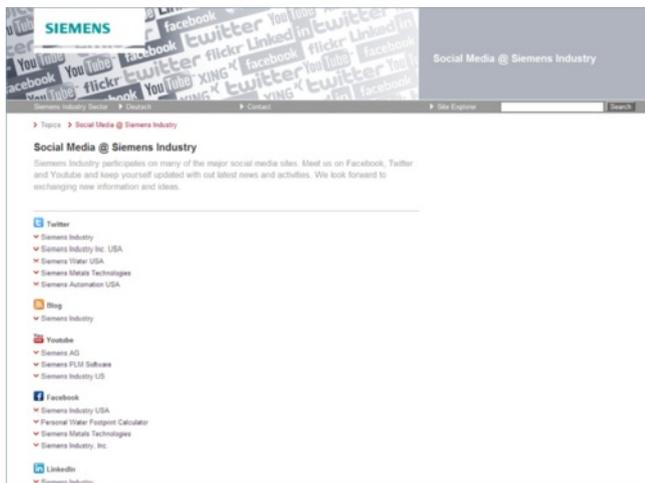

In addition to numerous other useful documents, you can also find the catalogs listed on the back inside cover of this catalog in the Information and Download Center. Without having to register, you can download these catalogs in PDF format or increasingly as digital page-turning e-books.

The filter dialog box above the first catalog displayed makes it possible to carry out targeted searches. If you enter "MD 3" for example, you will find both the MD 30.1 and MD 31.3 catalogs. If you enter "ST 70" both the ST 70 catalog and the associated news or add-ons are displayed.

Visit us on the web at:

www.siemens.com/industry/infocenter

Social Media

Connect with Siemens through social media: visit our social networking sites for a wealth of useful information, demos on products and services, the opportunity to provide feedback, to exchange information and ideas with customers and other Siemens employees, and much, much more. Stay in the know and follow us on the ever-expanding global network of social media.

Connect with Siemens Industry at our central access point:

www.siemens.com/industry/socialmedia

Or via our product pages at:

www.siemens.com/automation

or

www.siemens.com/drives

To find out more about Siemens' current social media activities visit us at:

www.siemens.com/socialmedia

Mobile Media

Discover the world of Siemens.

We are also constantly expanding our offering of cross-platform apps for smartphones and tablets. You will find the current Siemens apps at the app store (iOS) or at Google Play (Android).

The Siemens app, for example, tells you all about the history, latest developments and future plans of the company – with informative pictures, fascinating reports and the most recent press releases.

Appendix Industry Services

Your machines and plant can do more
– with Industry Services.

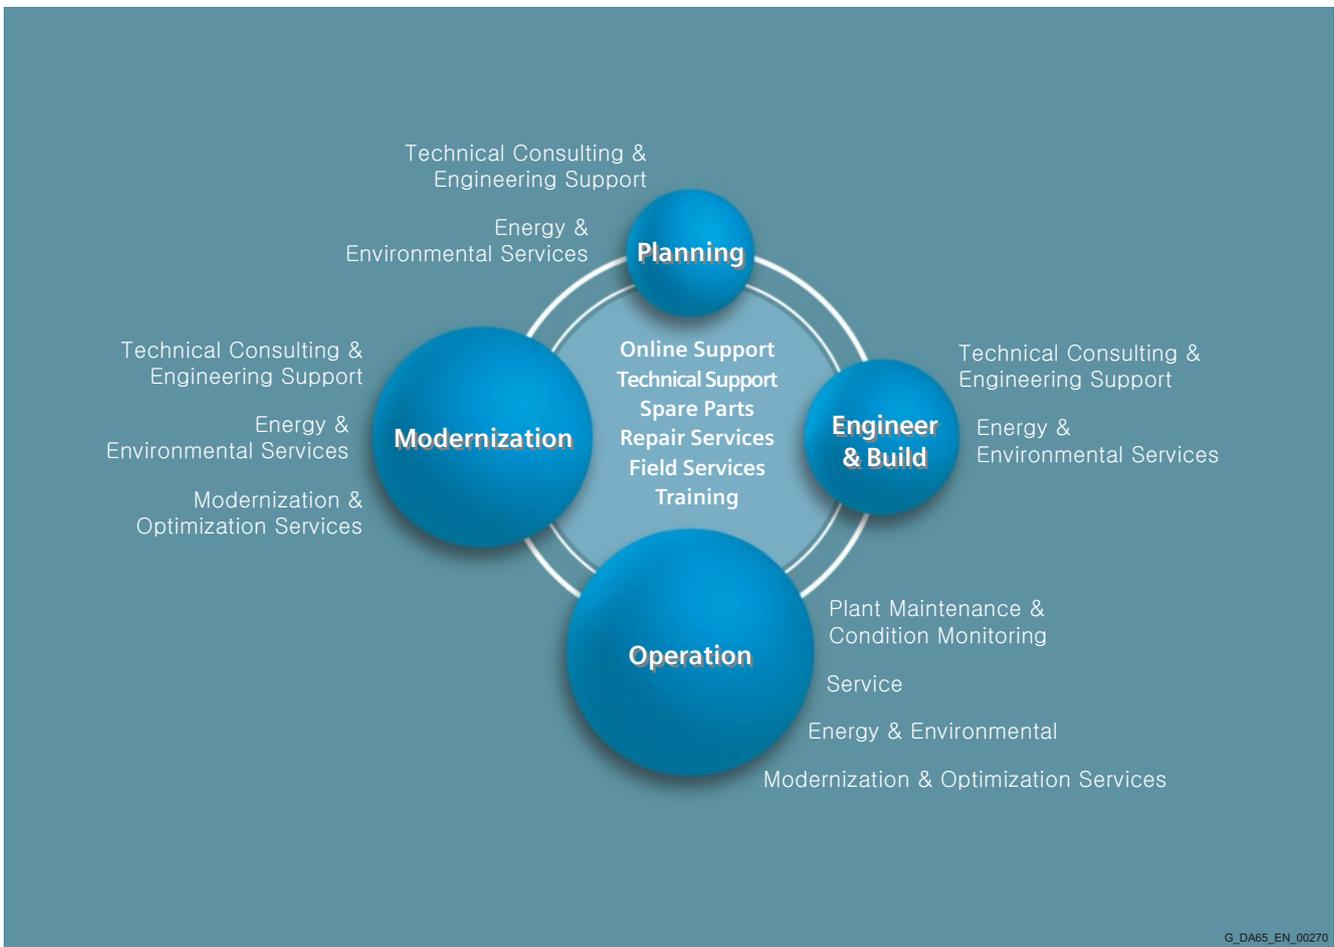

Whether it is production or process industry - in view of rising cost pressure, growing energy costs, and increasingly stringent environmental regulations, services for industry are a crucial competitive factor in manufacturing as well as in process industries.

All over the world Siemens supports its customers with product, system, and application-related services throughout the entire life cycle of a plant. Right from the earliest stages of planning, engineering, and building, all the way to operation and modernization. These services enable customers to benefit from the Siemens experts' unique technological and product knowledge and industry expertise.

Thus downtimes are reduced and the utilization of resources is optimized. The bottom line: increased plant productivity, flexibility, and efficiency, plus reduced overall costs.

Discover all advantages of our service portfolio:
www.siemens.com/industry-services

G_DA65_EN_00270

Siemens supports its clients with technology based Services across a plants entire life cycle.

Online Support

Online support is a comprehensive information system for all questions relating to products, systems, and solutions that Siemens has developed for industry over time. With more than 300,000 documents, examples and tools, it offers users of automation and drive technology a way to quickly find up-to-date information. The 24-hour service enables direct, central access to detailed product information as well as numerous solution examples for programming, configuration and application.

The content, in six languages, is increasingly multimediated – and now also available as a mobile app. Online support's "Technical Forum" offers users the opportunity to share information with each other. The "Support Request" option can be used to contact Siemens' technical support experts. The latest content, software updates, and news via newsletters and Twitter ensure that industry users are always up to date.

www.siemens.com/industry/onlineSupport

Online Support App

Using the Online Support app, you can access over 300,000 documents covering all Siemens industrial products - anywhere, any time. Regardless of whether you need help implementing your project, fault-finding, expanding your system or are planning a new machine.

You have access to FAQs, manuals, certificates, characteristics curves, application examples, product notices (e.g. announcements of new products) and information on successor products in the event that a product is discontinued.

Just scan the product code printed on the product directly using the camera of your mobile device to immediately see all technical information available on this product at a glance. The graphical CAx information (3D model, circuit diagrams or EPLAN macros) is also displayed. You can forward this information to your workplace using the e-mail function.

The search function retrieves product information and articles and supports you with a personalized suggestion list. You can find your favorite pages – articles you need frequently – under "mySupport". You also receive selected news on new functions, important articles or events in the News section.

Scan the QR code
for information on
our Online Support
app.

The app is available free of charge from the Apple App Store (iOS) or from Google Play (Android).

Technical Support

The ability to quickly analyze system and error messages and take appropriate action are key factors in ensuring that plants run safely and efficiently. Questions can arise at any time and in any industry, whether it's an individual product or a complete automation solution. Siemens technical support offers individual technical assistance in matters related to functionality, how to operate, applications, and fault clearance in industrial products and systems – at any time and globally, over the phone, by e-mail, or via remote access. Experienced experts from Siemens answer incoming questions promptly. Depending on the requirements, they first consult specialists in the areas of development, on-site services, and sales. Technical support is also available for discontinued products that are no longer available. Using the support request number, any inquiry can be clearly identified and systematically tracked.

Conditions of sale and delivery

1. General Provisions

By using this catalog you can acquire hardware and software products described therein from Siemens AG subject to the following Terms and Conditions of Sale and Delivery (hereinafter referred to as "T&C"). Please note that the scope, the quality and the conditions for supplies and services, including software products, by any Siemens entity having a registered office outside Germany, shall be subject exclusively to the General Terms and Conditions of the respective Siemens entity. The following T&C apply exclusively for orders placed with Siemens Aktiengesellschaft, Germany.

1.1 For customers with a seat or registered office in Germany

For customers with a seat or registered office in Germany, the following applies subordinate to the T&C:

- the "General Terms of Payment"¹⁾ and,
- for software products, the "General License Conditions for Software Products for Automation and Drives for Customers with a Seat or Registered Office in Germany"¹⁾ and,
- for other supplies and services, the "General Conditions for the Supply of Products and Services of the Electrical and Electronics Industry"¹⁾.

1.2 For customers with a seat or registered office outside Germany

For customers with a seat or registered office outside Germany, the following applies subordinate to the T&C:

- the "General Terms of Payment"¹⁾ and,
- for software products, the "General License Conditions for Software Products for Automation and Drives for Customers with a Seat or Registered Office outside of Germany"¹⁾ and
- for other supplies and/or services, the "General Conditions for Supplies of Siemens Industry for Customers with a Seat or Registered Office outside of Germany"¹⁾.

2. Prices

The prices are in € (Euro) ex point of delivery, exclusive of packaging.

The sales tax (value added tax) is not included in the prices. It shall be charged separately at the respective rate according to the applicable statutory legal regulations.

Prices are subject to change without prior notice. We will charge the prices valid at the time of delivery.

To compensate for variations in the price of raw materials (e.g. silver, copper, aluminum, lead, gold, dysprosium and neodym), surcharges are calculated on a daily basis using the so-called metal factor for products containing these raw materials. A surcharge for the respective raw material is calculated as a supplement to the price of a product if the basic official price of the raw material in question is exceeded.

The metal factor of a product indicates the basic official price (for those raw materials concerned) as of which the surcharges on the price of the product are applied, and with what method of calculation.

An exact explanation of the metal factor can be downloaded at:

www.siemens.com/automation/salesmaterial-as/catalog/en/terms_of_trade_en.pdf

To calculate the surcharge (except in the cases of dysprosium and neodym), the official price from the day prior to that on which the order was received or the release order was effected is used.

To calculate the surcharge applicable to dysprosium and neodym ("rare earths"), the corresponding three-month basic average price in the quarter prior to that in which the order was received or the release order was effected is used with a one-month buffer (details on the calculation can be found in the explanation of the metal factor).

3. Additional Terms and Conditions

The dimensions are in mm. In Germany, according to the German law on units in measuring technology, data in inches apply only to devices for export.

Illustrations are not binding.

Insofar as there are no remarks on the individual pages of this catalog - especially with regard to data, dimensions and weights given - these are subject to change without prior notice.

4. Export regulations

We shall not be obligated to fulfill any agreement if such fulfillment is prevented by any impediments arising out of national or international foreign trade or customs requirements or any embargoes and/or other sanctions.

Export of goods listed in this catalog may be subject to licensing requirements. We will indicate in the delivery details whether licenses are required under German, European and US export lists. Goods labeled with "AL" not equal to "N" are subject to European or German export authorization when being exported out of the EU. Goods labeled with "ECCN" not equal to "N" are subject to US re-export authorization.

The export indications can be viewed in advance in the description of the respective goods on the Industry Mall, our online catalog system. Only the export labels "AL" and "ECCN" indicated on order confirmations, delivery notes and invoices are authoritative.

Even without a label, or with label "AL:N" or "ECCN:N", authorization may be required i .a. due to the final disposition and intended use of goods.

If you transfer goods (hardware and/or software and/or technology as well as corresponding documentation, regardless of the mode of provision) delivered by us or works and services (including all kinds of technical support) performed by us to a third party worldwide, you must comply with all applicable national and international (re-)export control regulations.

If required for the purpose of conducting export control checks, you (upon request by us) shall promptly provide us with all information pertaining to the particular end customer, final disposition and intended use of goods delivered by us respectively works and services provided by us, as well as to any export control restrictions existing in this relation.

The products listed in this catalog may be subject to European/German and/or US export regulations. Any export requiring approval is therefore subject to authorization by the relevant authorities.

Errors excepted and subject to change without prior notice.
