ABB SACE Division – Environmental and Ethics Quality certificated

Among the companies in the Group, ABB SACE is up front in dedicating considerable resources to achieving sustainable development and environmental protection objectives. Confirmation of this is provided by all the company production sites having obtained ISO 9001 quality certification and ISO 14001 environmental management system certifications.

Using analysis tools such as LCA (Life Cycle Analysis), ABB SACE's design activities already include assessment and improvement of the environmental performances of its products over their whole life cycle during the initial stage, in order to guarantee optimisation of the technical and energy performances during service, to control and reduce environmental impact during the production stage and to define the end of life management scenarios.

The Garbagnate Monastero site has also obtained the certification of integrated management system QAS (Quality, Environment and Safety management system.)

All company sectors are, in fact, actively involved in implementing improvement policies for environmental management through rationalisation of consumption of raw materials and energy, prevention of pollution, respect of water and air, limitation of noise emission and reduction in waste from production processes, as well as carrying out periodic environmental audits at major suppliers 'premises.

Each of these objectives and activities is the result of farsightedness in adopting ecological policies and methods for reducing the environmental loads and, within the panorama of Italian companies, ABB SACE is a leader from this viewpoint, too, just as it is for the quality of its products.

ABB: Energy Efficiency for a sustainable development.

ABB takes care of its commitment in promoting environmental protection and development, providing sustainable products and solutions that contribute to improving energy efficiency and plant productivity, reducing at the same time CO₂ emissions.

Selection and design tools

Technical softwares

DOC 2

DOC 2 is a program for the design and calculation of single-line diagrams of low- and medium-voltage electrical systems, for selection of switching and protection devices and for testing and co-ordination of protection devices.

Thanks to the design functions provided by the integrated CAD, the new switchboard configuration module makes it possible to develop ABB electrical switchboard projects and produce commercial technical quotations with CAT.

CAT 7

CAT 7 is a tool allowing ABB SACE products to be easily chosen and fitted with accessories in order to rapidly and accurately prepare estimates and quotes.

With CAT 7 choosing and adding accessories to ABB SACE products is now easier and faster than ever, thanks to the new product selection mask and accessory module.

Curves

Curves is the most direct software for verifying the characteristics of protection devices and system components intervention.

Setting, verifying and documenting the calibration of release devices and co-ordinations is easier than ever before.

OTC

The OTC thermal calculation module makes it possible to verify the thermal performance of ABB switchboards and to size fans and air conditioning units to install on the panel.

Front CAD

FrontCAD is a CAD application for drawing the electric boards design and layouts.

FrontCAD contains a big library of blocks, shapes of many ABB products, like enclosures and other electrical devices; those draws can be used to create the CAD layout of distribution and automation switchboards.

FrontCAD is compatible with different type of CAD application.

“DOC & CAT” is the technical software suite which helps to bring projects and quotes to fruition easily, quickly and completely.

The entire software collection is available to download for free from the Online Business portal.

ABB Software Desktop is a platform for installing and managing these Softwares.

ABB Software Desktop automatically detects which programs are installed on the computer, allowing them to be updated.

Gemini.

Something completely different in switchboards.

Gemini. Quality and safety.

ABB's Gemini is designed and built in compliance with reference Standards that define its constructional and functional characteristics. In particular, the IP66 degree certifies that Gemini is totally protected against the infiltration of solid bodies and is resistant to the penetration of jets of water similar to sea waves.

Absolute protection is provided by double insulation even in the event of indirect contact.

Gemini. Fit for all applications.

Even in very difficult application circumstances, Gemini gives high-level performances, with resistance to fire and abnormal heat up to a temperature of 750 °C and a functioning temperature from -25 °C to 100 °C.

There are as many configurations as there are ABB devices for low voltage automation and distribution: moulded-case circuit breakers, modular circuit breakers, monitoring, control and signaling devices, wiring ducts and electrical connection systems.

All of these components give the “Gemini system” an enormous range of ad hoc solutions that are easy to assemble with the snap-on system.

ArTu.

Go ahead and select the switchgear you need.

ArTu. A great offer, really high performances

ABB proposes three series of switchgear with different characteristics thought up to make it possible to select the most suitable switchgear for the installation requirements. Different sizes for optimal use of the spaces available. Great savings in storage space is ensured by the rapid assembly kit containing so few pieces that skilled personnel is not required. IP degrees of protection for all types of application up IP65 - the only switchgear to reach such a high value. Extremely sturdy and flexible, it is made for plants up to 6300A.

ArTu. Born certified.

Fully checked and certified (IEC 60439-1 and IEC 61439-1 and 2 Standard) by an external independent organisation (Acae Lovag), the ArTu switchgear is a synonym of safety and quality. The certification is the fruit of severe tests carried out on the whole configuration, consisting of metalwork structures, circuit-breakers and busbar system.

Certificato N°OHS-015

Certificato N°1612/98/S

Certificato N° EMS-051

Certificato N°SGI004

ArTu. A long experience through many projects.

The ArTu switchgear was born from an innovative project, created around the needs of all the professional figures involved in building and installing switchgear. This is constantly updated on the basis of the numerous projects which over these past years have had the ArTu series of switchgear as their leading player (Airports, underground railways, hospitals, industrial complexes, residential complexes, ports, tunnels, stretches of railways, theatres, etc.).

ArTu L.

Everything you need simply and conveniently

ArTu L. Why complicate your life?

Up to 800A you have a series of both wall-mounted and floor-mounted switchgear available, able to ensure a high standard of quality along with maximum simplicity of selection and assembly.

Fitted with a structure, which is completely open at the sides, means you can carry out cabling very conveniently, with the switchgear placed horizontally on two trestles. And, if we are talking about cabling, there is nothing which simplifies and speeds it up better than the Unifix H or L wiring system, created by ABB for its modular and moulded-case circuit-breakers.

The cable riser container is available in a width of 300mm to take different busbar systems, and, furthermore, with a convenient box placed above the switchgear, increases the space available for the incoming cables.

ArTu M.

Top level functionality and protection.

ArTu M. Maximum protection up to 630A.

The ArTu M series switchgear is ideal for terminal wall-mounted switchgear with modular circuit-breakers and floor-mounted secondary distribution switchgear with moulded-case circuit-breakers up to 630A.

Many versions are available, for wall-mounted installation with depths of 150 and 200mm and for floor-mounted installation, with a depth of 250mm.

The degree of protection is at top market levels, reaching up to IP65, thanks to an innovative design and advanced construction systems.

The switchgear is available in 600mm useful width, with the possibility of installing 24 DIN modules in one row, and 800mm width choosing between installation of 24 DIN modules in one row plus the cable riser, or 36 DIN modules in one row.

ArTu K.

New horizons up to 6300A.

ArTu. High performances? No problem

The ArTu K series switchgear is ideal for primary distribution switchgear (Power Center type) with air and moulded-case circuit-breakers and any internal segregations up to Form 4, and for floor-mounted secondary distribution switchgear with moulded-case and modular circuit-breakers.

The ArTu K series consists of modular switchgear for floor-mounted installation with depths of 150, 225, 300, 500, 700 and 900mm, with IP31, IP41 and IP65 degrees of protection - the highest value available on the market.

Within the ArTu K series switchgear, like all the series in the range, it is possible to install ABB apparatus (System Pro M modular circuit-breakers, Tmax moulded-case circuit-breakers, T and XT series and Emax air circuit-breakers) with an excellent and certified level of integration. The switchgear is available in four functional widths (390, 600, 800mm and 1000mm) and in two functional heights (1800 and 2000mm), which allow installation of 9 and 10 modules 200mm in height respectively.

Presentation of the range

Characteristics of Gemini switchboards

1 Gemini is the result of design work conducted by ABB with the direct collaboration of switchboard manufacturers, installers and designers who considered versatility to be the discriminating element when purchasing a switchboard, equally as important as sturdiness and reliability.

Gemini fulfils this requirement by providing a product that can be used for three different purposes: in addition to the basic configuration it also provides the components necessary for equipping it as an automation switchboard or as a distribution and mixed switchboard.

In all applications, compatibility with ABB protection, control and monitoring products means that a real system of integrated and complementary functions can be configured.

Typical examples of some Gemini applications can be seen in installations in industrial production departments and on board machines, in galvanization plants and varnishing cabins, in petrol stations and car-washing plants, boiler-rooms, car parks, shopping malls and in any other environments where distribution and automation demand specific safety requirements and service continuity.

Gemini also has flexible measurements, with six different box sizes and internal space to accommodate from 24 to 216 DIN modules. To respect safety standards, all the switchboard's components can be fixed to the base plate or to the box frame without having to use any tools; wiring is carried out from the front followed by snapping the base plate or the frame onto the box. The patented frame is fitted with the cable duct incorporated in the uprights.

In its design, Gemini repeats the shapes and RAL 7035 grey color of the ArTu switchboards with which it can be configured as a main protection switchboard.

In the basic configuration, Gemini switchboards are composed of boxes in six different sizes ranging from 335x400x210 mm to 840x1005x360 mm (WxHxD, external measurements) and with opaque or transparent doors.

In both versions, the doors are reversible and clip onto the hinges without the need to use tools; the fact that they open at an angle of more than 180° means that it is easy to work on the components installed inside the switchboard. The seal applied by extrusion along the sides of the doors guarantees IP66 degree of protection.

Access to the inside of the switchboard is protected by a standard double bit lock that can be replaced by locks of another type available in the accessories. Boxes and doors can be requested either separately or as combined "box + door" codes, to make filling out the order form more flexible.

Inside the packages, the door is always wrapped separately and inserted inside a pocket that protects it from accidental damage until wiring is completed and the switchboard is installed.

Hole-cover plugs to guarantee IP protection and double insulation for wall mounting are also supplied with the pack together with the instruction sheet.

Gemini is made in a thermoplastic material that has a very low halogen content and is 100% recyclable.

The environmental compatibility of Gemini is an important objective right from the design phase where the Life Cycle Assessment (LCA) procedure, defined in 1990 during the Society of Environmental Toxicology and Chemistry Conference (Vermont, USA), is followed. Life Cycle Assessment is an objective method for analyzing the energy and environmental loads relating to a product, process or activity, carried out by identifying and quantifying energy, the materials used and emissions released into the environment. Divided into four phases, the assessment covers the entire life cycle of the product, process or activity, from the extraction and transformation of raw materials to manufacturing and distribution, and from usage to recycling and decommissioning.

No tools are needed for installation. The doors hook onto the hinges with special hinge pins and are reversible.

Fixing hooks and feet allow the frame to be snap-mounted inside the box.

Presentation of the range

Characteristics of ArTu switchgears

1

The range of ABB SACE ArTu distribution switchgear provides a complete and integrated offer of monobloc metalwork structures and kit systems for main and sub low voltage distribution switchgear, which satisfy all plant requirements depending on the type of installation, degree of protection required, and electrical and mechanical characteristics.

Starting from simple assembly kits, the ArTu switchgear allows numerous switchgear configurations:

- for Power Center type main distribution, with a prevalence of air circuit-breaker and moulded-case circuit-breakers and any internal segregations up to Form 4;
- for floor-mounted secondary distribution, equipped with moulded-case and modular circuit-breakers;
- for wall-mounted end distribution, with just modular circuit-breakers.

The user of ABB SACE circuit-breakers can therefore have a complete system of enclosures, in accordance with the reference standards, which guarantees absolute compatibility between the various elements (enclosures, circuit-breakers and distribution systems), together with maximum assembly and cabling facility.

Special consideration has been given to cabling requirements, foreseeing dimensions of the structure, but also providing special seats for fixing the plastic cabling duct horizontally and vertically.

The ArTu switchgear is noted for the following features:

- integrated range of modular metalwork structures up to 6300 A with common accessories;
- possibility of fulfilling all application requirements in terms of installation (wall-mounting, floor-standing, monobloc, corner versions and cabinet kits) and degree of protection (IP31, IP41, IP43, IP65);
- maximum integration with modular apparatus and the moulded-case and air circuit-breakers, so that additional drilling or adaptations are not required;
- minimum switchgear assembly times, thanks to the simplicity of the kits, standardisation of the small assembly items, self-supporting elements and the presence of clear reference points for assembly of the plates and panels;
- segregations in kits up to Form 4;
- use of the Unifix rapid cabling system.

The range of ArTu enclosure structures allows construction of numerous switchgear configurations

The ArTu switchgear allows segregations up to Form 4 to be made

The use and installation of the kits according to the instructions provided means that assembly and cabling times can be reduced to a minimum, for example thanks to the reference points for positioning the panels and plates, and that respect of the insulation distances and the rated characteristics of the circuit-breakers are guaranteed.

The ArTu range includes three different series of switchgear, which are completed with the same accessories:

ArTu L series

This consists of a range of modular switchgear kits, with a capacity of 36 modules per row and IP31 degree of protection (without door) or IP43 (basic version with door). Installation can be either wall or floor-standing:

- Wall-mounted ArTu L, with 600, 800, 1000, and 1200mm (useful) heights, 165mm depth, 600mm width. It allows installation of the modular System pro M apparatus, and moulded-case Tmax T1-T2-T3 circuit-breakers, XT1 and XT3 circuit breakers.
- Floor-standing ArTu L, with 1400, 1600, 1800, 2000mm (useful) heights, 195 mm depth, 600mm width. It allows installation of the modular System pro M apparatus and moulded-case Tmax T1...T6 800A circuit-breakers (fixed version with front terminals); XT1...XT4 (fixed version with front terminals).

ArTu M series

This consists of a range of monobloc switchgear for wall-mounted installation (with depths of 115 and 165mm and with IP65 degree of protection) or floor-standing installation (with depth of 195 mm and IP31 or IP65 degree of protection), where it is possible to mount System Pro M modular apparatus and Tmax T1, T2 and T3, XT1 and XT3 moulded-case circuit-breakers on a DIN rail.

In the wall-mounted versions ($D = 165$ mm), the Tmax moulded-case circuit-breakers up to 250 A can be installed, whereas in the floor-mounted versions, the moulded case Tmax T series up to T6, XT series up to XT4 circuit-breakers can be installed.

ArTu K series

This consists of a range of modular switchgear kits for floor-standing installation with six different (useful) depths: 150, 225, 300, 500, 700 and 900 mm, and with IP31 degree of protection (without front door), IP41 (with front door and side ventilated panels) and up to IP65 (with front door and blind side panels). It is possible to install System Pro M modular apparatus, the ranges of T and XT series circuit-breakers in all their possible configurations, and Emax X1, E1, E2, E3, E4 and E6 air circuit-breakers.

Use and installation of the kits, according to the instructions provided, allow assembly and cabling times to be reduced to a minimum

Presentation of the range

Characteristics of ArTu switchgears

1

The ArTu switchgear has the following functional widths:

- 390 mm, for installation of moulded-case circuit-breakers up to 1600 A (T7);
- 600 mm, which is the basic dimension for installation of all the apparatus;
- 800 mm, for making the lateral cable container inside the structure of floor-mounted switchgear or to use panels with 36 DIN modules in one row.
- 1000mm, for installation of Emax E4, E6 air circuit-breakers.

The panels for Tmax, and Emax circuit-breakers have 100 mm modularity.

The useful inside height space varies from 600 mm (L wall-mounted series) to 2000 mm (L and M floor-standing series and K series), offering optimisation and automatically reducing the spaces taken up by the switchgear.

With the shaped section busbar system, ArTu switchgear for low voltage power distribution further enhance perfect integration with the apparatus and, in full conformity with the IEC 60439 Standard, can be certified by carrying out only the individual tests.

Using Artu enclosures and relative accessories together with modular apparatus and moulded-case and air circuit-breakers, it is therefore possible to build AS or ANS type switchgear without carrying out further type tests, simply respecting the selection criteria and the assembly instructions for the various components.

The ArTu distribution system consists of:

- shaped section copper busbars with capacity from 400 A to 3200A;
- flat copper busbars up to 6300A;
- busbar holders and relative crosspieces for short-circuit withstand up to 105kA;
- flexible busbars for connection of the moulded-case circuit-breakers and screws and hammer for connection of the latter to the shaped section busbars.

The panels for
Tmax, and Emax
circuit-breakers
have 100mm
modularity

A peculiarity of the shaped section busbar system is its extremely compact dimensions, which allow it to be assembled directly inside the cable container, on the back or on the side of the structure, keeping front access. This is possible thanks to the scaled or linear type busbar holders, which also allow assembly in the L or M floor-mounted series of switchgear, with reduced dimensions.

The ABB SACE busbar and accessories system prepared for installation in ArTu distribution switchgear undergoes the short-circuit withstand tests with a value of I_{sc} up to 6300 A and I_{cw} up to 105 kA (1s) according to the IEC 60439-1 Standard, in ABB laboratories recognised by ACAE/LOVAG.

The Unifix rapid cabling system, which allows simple, rapid and safe cabling of all the ABB SACE apparatus, completes the switchgear. Unifix is available in two versions: the Unifix H series, suitable for structured cabling of moulded-case circuit-breakers up to 250A (T series up to T3 and XT series with XT1 and XT3) and modular System Pro-M circuit-breakers, and the Unifix L series, specifically for rapid cabling of modular System Pro-M circuit-breakers.

A fundamental characteristic of these systems is the possibility of combining different types of circuits (single-phase/three-phase/auxiliary) within a single module.

Unifix also allows bench cabling to be carried out, and to then only install it in the switchgear at a later time, without any limitation of the types or combinations of apparatus which can be installed. This way cabling times are considerably reduced, making realisation of the power supply by means of cables superfluous, as the rigid coupled connectors - standardised for the different types of apparatus - do, in fact, see to this.

The ABB SACE busbar system and accessories for installation in the distribution switchgear

Gemini switchboards

General

ABB SACE's Gemini range is revolutionizing the market of low voltage electric insulating switchboards. The reason for this is that it is the first switchboard made in thermoplastic material, to which the co-injection molding technique gives the same mechanical characteristics as polyester.

This means that it is extremely sturdy, with its rigid covering and expanded internal core. Moreover, it contains no fiberglass, a material that with time rises to the surface, jeopardizing the functioning and safety of switchboards made in polyester with which it is usually mixed.

Gemini switchboards have IP66 degree of protection (IP30 with the door open and with the appropriate components installed) and a very high resistance to chemical and atmospheric agents. This is the reason why Gemini guarantees excellent performances even in particularly severe operating conditions.

Gemini switchboards are made with co-injection, which ABB SACE is the first manufacturer in the electric field to use as a molding technique.

This process obtains a "sandwich" of two materials with a compact external covering and an expanded core, guaranteeing the highest level of mechanical protection against impacts (IK10) without the need to add hardening substances.

In distribution and mixed applications, the Gemini switchboard is designed to be fitted with System pro M modular devices and Tmax moulded-case circuit breakers.

The frame is the load-bearing element of the configuration: DIN rails, partial modular plates and the special Tmax mounting and cabling kits are snapped onto the uprights. All the components can be adjusted up to six levels of depth with 12.5 mm pitch and arranged in height with a standard installation pitch of 150, 225 and 300 mm and 75 mm distance between the rows.

Blank or drilled front panels are applied to protect the equipment and these can be hinged onto both sides; the cables are housed

inside the vertical wiring duct integrated in the uprights according to an exclusive ABB patent.

Wiring is carried out by pulling out the frame and working from the front; the ergonomic grip and the standard feet and snap-on hooks supplied make it easy to insert it inside the switchboard after the job is finished.

To finish the job, the inner door can be mounted (reversible and in insulating material), guaranteeing IP30 degree of protection when the switchboard door is open.

No tools are needed unless the inner door is equipped with buttons, warning lights, etc.

The frame can be extracted to make wiring operations easier at the workbench.

The special structure of the inner perimeter of the box ensures further protection against the penetration of water. The box is supplied with a spirit level.

Technical characteristics

Compliance with Standards	CEI EN 50298, CEI 23-48, CEI 23-49, IEC 60670, CEI EN 60439-1 CEI EN 62208 - IEC 61439-1-2

Suggestion for installation of Tmax moulded-case circuit breakers

The table indicates the type of installation required for the different versions of Tmax moulded-case circuit breakers in Gemini switchboards. Before carrying out wiring operations check compliance with Standards on the basis of the technical characteristics of the switchboard and circuit breaker (CEI 23-51 or CEI EN 60439-1).

Structures

Boxes and doors

- Available in 6 sizes
- Single order code combined with box and transparent and opaque door
- Pack with door dismounted and wrapped separately
- Door designed so that it can be hooked onto hinges at both vertical sides and mounted without the use of tools
- To be mounted to the wall using internal holes or fixing brackets supplied as accessories
- Door opening at an angle of more than 180°
- RAL 7035 grey color
- Doors supplied with 2 standard double bit locks (3 for sizes 5 and 6) that can be replaced with locks for ciphered key or with square/triangular impression (the standard triplex key is suitable for use with three types of impressions).

Completion of structure

Kit for installing Tmax moulded-case circuit breakers

- For installing Tmax moulded-case circuit breakers in fixed version with front terminals
- Composed of a plate with special drilled holes and a protection panel with vertical slots that can be hinged on both sides and snap-on mounted (in compliance with reference Standards a tool must be used for removing the panel)
- Available for sizes 2-6
- Version H 150 with drillings for Tmax T1 3 poles (with and without residual current releaser), Tmax T1 4 poles (with and without residual current releaser), Tmax T2 3 poles (with and without residual current releaser), Tmax T2 4 poles (without residual current releaser)
- Version H 300 with drillings for Tmax T2 4 poles (with residual current releaser), Tmax T3 3 poles (with and without residual current releaser), Tmax T3 4 poles (with and without residual current releaser)
- Snap-on mounting onto uprights with the possibility of adjusting the plate depth

Panel + plate

Size	Dimensions W (mm)	Code			Package/ No. of pieces

2/3	375	1SL0361A00			1/4
4/5	500	1SL0362A00			1/4
6	700	1SL0363A00			1/4

Fix-O-Rapid

Rapid mounting device for attaching wiring ducts to the base plate: it snaps onto the plate after drilling a Ø 7 mm hole. Two Fix-O-Rapid devices are enough for each wiring duct section.

Fix-O-Rapid guarantees maximum insulation since it does not involve the use of any metal component inside the wiring duct.

If the wrong wiring duct is selected, it can be dismounted and a version with the same base and a different height can be attached to the Fix-O-Rapid.

Description	Code			Package/ No. of pieces
Rapid mounting device for wiring duct, W 25mm	05 270			20/600
Rapid mounting device for wiring duct, W 40mm	05 272			20/600

Rapid mounting device for wiring duct, W 80mm	05 276			20/240
Rapid mounting device for wiring duct, W 100mm	05 278			20/240
Rapid mounting device for wiring duct, W 125mm	05 280			20/240
Rapid mounting device for wiring duct, W 150mm	05 282			20/240

Completion of structure

Base plates

- Available in three versions in blank or drilled metal and insulating material
- Positioning at 3 different depths for size 1, 4 different depths for sizes 2-3-4 and 7 different depths for sizes 5-6 (adjustments with 30 mm pitch)
- Supplied with feet and hooks adjustable at three further positions (with 7.5 mm pitch)
- Snap-on mounting
- Plates can also be mounted directly on the base with the special kit

Anti-condensation kit

- Kit made of special material to prevent condensation from forming inside the switchboard: it includes **GORE™ MEMBRANE VENTING**
- Impermeable to water (pressure): 0.6 bar/60 sec.
- Air flow: 400 ml/min. (dp = 70 mbar)
- 1 kit for sizes 1-2, 2 kits for sizes 3-4 and 3 kits for sizes 5-6 are recommended to guarantee adequate dissipation. In any case the number of kits to be installed depends on the number and type of devices installed inside the switchboard.

Description	Code	Package/ No. of pieces

ArTu L modular structures

General

The ArTu L range is composed of structures consisting of modular kits which can be built up in different combinations able to cover applications of terminal distribution switchgear, both wall-mounted up to 400 A and floor-standing up to 800 A.

The overall dimensions are reduced thanks to the depth of just 200 mm for the former and 240 mm for the latter. Both versions can be placed side-by-side with other structures and with cable risers with a width of 300 mm.

Modular apparatus of the System pro M series, moulded-case * T series up to T6 800 A, XT series up to XT4, (fixed version with front terminals) circuit-breakers are housed inside the ArTu L switchgear, with a capacity of 24 or 36 modules per row.

Apart from in the traditional plain and pre-drilled versions with 200 mm height, the modular panels are also available in the 150 mm height, which allows optimisation of the space available. Cabling becomes simpler, thanks to the structure which is completely open: in fact, it is possible to conveniently carry out cabling horizontally on trestles inside the workshop or on the building site with the switchgear completely open and then only complete its assembly when cabling has been completed.

It is possible to use the rapid Unifix (H and L) cabling system. Furthermore, the kit for fixing the circuit-breakers further simplifies the job, thanks to the practical rapid snap-on hooking up system and the standardised small items.

The 400 and 800A busbar system with shaped section, with prefabricated connections between circuit-breakers and busbars placed in the various situations can be used. It is always possible to use the traditional flat busbars for capacities up to 630A.

Wiring becomes easier thanks to the completely open structure, and it is in fact possible to wire without problems horizontally on trestles.

The degree of protection goes from IP31, for the versions without door, up to IP43 for the versions with door.

Lateral access is guaranteed, as is the possibility of mounting the vertical wiring duct both on the right, on the left and horizontally.

An accessory box is available, to be placed above the switchgear roof, which increases the space available for the incoming cables and, together with the distribution frame, makes distribution simpler. The maximum form of segregation, which can be obtained, is type 2.

A system of busbars of 400 and 800A with shaped section can be used with prefabricated connections between circuit-breakers and busbars placed in the different situations.

Technical characteristics

	Wall-mounted D=204mm	Floor-standing D=240mm
Compliance with Standards	CEI EN 60439-1/IEC 61439-1-2	CEI EN 60439-1/IEC 61439-1-2
Rated service voltage Ue	up to 690 V	up to 690 V
Rated insulation voltage Ui	up to 1000 V	up to 1000 V
Rated frequency	50-60 Hz	50-60 Hz
Rated impulse withstand voltage Uimp	6 kV	8 kV
Rated current In	up to 400 A	up to 800 A
Rated short-time short-circuit withstand current Icw	up to 25 kA	up to 35 kA
peak current Ipk	up to 52.5 kA	up to 74 kA
Degree of protection IP	31 without door 43 with door	31 without door 43 with door

(1) The external overall dimensions of floor-mounted ArTu L switchgear include the palletisable base strip h=100mm (angle and flanges to be ordered separately).

(2) The functional dimensions represent the useful space for installing the apparatus.

(3) The wall-mounted structures cannot be superimposed.

(4) In this catalogue, reference is always made to the 204/240mm depth corresponding respectively to the overall dimensions with front door. The useful dimensions between panel and back of the structure are 165/195mm.

Completion items for installation on DIN rail

Screw fixing of ducts up to 100x100mm.

Fixing with rapid hooking base of ducts up to 100x100mm.

DIN cut-out hole covers

Code	Description
AD1086	Hole covering strip DIN W=2000mm - grey RAL 7035
AD1088	Hole covering strip DIN 24 modules - grey RAL 7035
AD1089	Hole covering strip DIN 36 modules - grey RAL 7035

Supports for horizontal wiring duct

Allows assembly of the cabling wiring duct horizontally and vertically up to 100x100mm (in the case of installation in floor-mounted structure with removable side panel LF.... the vertical wiring duct has maximum dimensions of 100x80mm h/w). The support AD1098 has compensation drillings as the height and width of the wiring duct varies. The accessory is also prepared with Ø7mm holes for assembly of the ABB wiring duct by means of the Fix-O-rapid hook.

Code	Description
AD1096	Support for horizontal/vertical wall-mounted wiring duct
AD1098	Support for horizontal/vertical floor-mounted wiring duct

Depth adapter

Code	Description
AP6000	Depth adapter W=600mm for side-by-side Pro M - Tmax T1-T2-T3-XT1- XT3

Polished flange for Tmax XT2-XT4 positioned side by side on plate

Code	Description

Table for selection and assembly of busbars with shaped section and busbar holders

The use of the correct number of busbar holders ensures resistance to electrodynamic forces in the case of a short-circuit. Assess the maximum distance (max X) which must not be exceeded between two consecutive busbar holders according to the max. I_{cc} .

The distance between the first busbar holder and the end of the busbar must not exceed $\frac{1}{4}$ of "X".

If mounting XT1-XT3 on Unifix H, the polished flanges AD3301, AD3302, AD3303, AD3304 must also be ordered, see spare parts page 3/49.

Unifix systems

3

Direct connection with the 400/800A system of busbars with shaped section.

Feeder module for 400A frame (L1-L2-L3-N).

Direct power supply of the bases by means of feeder module ED2209.

Power supply by means of general row circuit-breaker.

Connections (L1-L2-L3-N) for System Pro M modular apparatus.

Power supply of the busbar with 100A feeder module without cable. Terminal capacity 35mm².

Direct power supply of the busbars by means of feeder module.

Power supply by means of modules and cables in parallel.

Flat busbar

Copper with 1750mm drilled length. Can be used with both linear BP0630 and scaled BP0634 busbar holder.

Description	Dimensions (mm) L	In (A)	Code			Package/ No. of pieces
No. 2 copper busbar 15x5		250	BR0250			1/2
No. 2 copper busbar 25x5	1750	400	BR0400			1/2
No. 2 copper busbar 30x10		630	BR0630			1/2

Busbars holders

Busbar holders made of insulating self-extinguishing material, certified in conformity with the EN 60439-1 Standard for $I_{cc} \leq 35\text{kA}$.

Description	Code			Package/ No. of pieces
No. 2 linear busbar holders In=630A - 32kA	BP0630			1/1
No. 2 terminal covers for linear busbar holders BP0630	BP0632			1/1
No. 2 scaled busbar holder In=630A - 23kA	BP0634			1/1

Crosspieces for flat busbars

Description	Mounting Pic.	Code		Package/ No. of pieces
Busbar vertically on back of structure or of cable container				
No. 2 crosspieces back of structure W=600mm with BP0630	1	TL1000		1/2
No. 2 crosspieces back of structure W=800mm with BP0630	1	TL1100		1/2
Busbars vertically on back of external cable container or horizontally in cable connection box				
No. 2 crosspieces back of cable container W=300mm with BP0630 or scaled BP0634	2	TL3000		1/2

Distribution system

Flexible busbars

Flexible busbars insulated with self-extinguishing material.

Description	Dimensions (mm) L	In (A)	Code			Package/ No. of pieces
No. 2 flexible busbars, section 20x3		250	BF1602			1/2
No. 2 flexible busbars, section 20x5		400	BF2502			1/2
No. 2 flexible busbars, section 24x6	2000	500	BF4002			1/2
No. 2 flexible busbars, section 32x5		630	BF4012 ⁽¹⁾			1/2

⁽¹⁾ Only for circuit-breakers with front extended terminals or rear terminals

Earthing busbars

Copper busbars drilled and threaded for rapid connection of the conductors.

Description	Dimensions (mm) L	Code			Package/ No. of pieces
No. 2 earthing busbars 20x5 threaded M6		EV1119			1/2
No. 2 earthing busbars 25x5 threaded M6	2000	EV1120			1/2
No. 2 earthing busbars 50x5 threaded M6		EV1121			1/2

Insulators and copper busbars for neutral/earthing

Description	Code			Package/ No. of pieces
No. 50 hexagonal insulators 30x30mm	EV1122			1/50
No. 50 hexagonal insulators 30x30mm	EV1123			1/50
No. 25 hexagonal insulators 36x50mm	EV1124			1/25

ArTu M monobloc structures

General

The ArTu M switchgear offers a simple and functional solution for constructing secondary and terminal distribution switchgear for uses where the degree of protection is important.

It can be wall or floor-mounted, only requiring assembly of the front door and side panels thanks to their characteristic monobloc structure.

Within the series, the wall-mounted switchgear is preset for installation of System Pro M modular apparatus and Tmax T1, T2 and T3 T serie up to T3 250 A, XT series up to XT3, (fixed version with front terminals) moulded-case circuit-breakers up to 250A and the Unifix wiring system.

The wall-mounted models include two depths (150 and 200mm), a functional width of 24 DIN modules (600 mm) and four different heights (600, 800, 1000 and 1200 mm), corresponding to 3, 4, 5 and 6 DIN rows with 200 mm centre distance.

It is also possible to use the 150 mm centre distance, thereby considerably increasing the internal capacity, which reaches 4, 5, 6 and 8 DIN rows respectively.

The floor-mounted switchgear, on the other hand, has a depth of 250 mm and is available in two functional widths (600 mm 24 DIN modules and 800 mm 36 DIN modules or 24 DIN modules plus cable riser) in four heights (1400, 1600, 1800 and 2000 mm), corresponding to 7, 8, 9 and 10 DIN rows respectively, with 200 mm centre distance. Again in this case it is possible to use the 150 mm centre distance to increase the internal capacity, taking this to 9, 10, 12 and 13 DIN rows respectively.

The sides of the M series floor-mounted switchgear consist of two removable side panels, which allow lateral coupling of the structures or cable containers with useful width of 300mm.

The modular System Pro M, and the Tmax up to T6 T serie up to T6 800 A, XT series up to XT4,(fixed version with front terminals) moulded-case circuit-breakers in the fixed version with front terminals are found within the floor-mounted version. The busbar systems with shaped section up to 800A, flat up to 630A and the Unifix cabling system can be used.

The front door, available either made of transparent tempered glass applied from the inside, or of plain steel sheet, can be replaced according to the different application requirements by finishing frames with IP 31 degree of protection. It is also possible

to carry out fixing to the wall using dedicated brackets for the floor-mounted versions.

The 100 mm high base strip, complete with removable flanges, is already mounted on the structure, and allows easy handling with transpallets. Removable flanges for conductor inlet are also provided in the top and bottom area.

The maximum rated current is 630 A and the degree of protection varies from IP31 (without front door) to IP65 (with front door).

Upper removable flanges allow easy access

Cabling control is made easier thanks to lateral removable panels

Technical characteristics

The cable container, placed at the side of the structure with the special kit (AD1012), keeps the IP65 degree of protection when installed with an external door.

The external doors are used on the additional cable container to be placed side by side with an ArTu structure with door (IP65). The internal doors are used on the additional cable container placed side by side with an ArTu structure in the IP31 version (i.e. without door and with finishing profiles). This ensures uniformity of appearance between the structure and additional cable container.

Furthermore, the internal doors can be used as internal segregations of the cable container: should a segregation with door of the additional cable container open be requested, it is possible to mount both the internal and external door at the same time.

⁽¹⁾ The overall dimensions of the ArTu M switchgear starting from the 1400mm (1596mm) height include the base strip h=100mm and the side panels.

⁽²⁾ The functional dimensions represent the useful space for installing the apparatus.

⁽³⁾ In this catalogue, reference is always made to the 150/200/250mm depths corresponding to the external overall dimensions with front door.

The useful dimensions between panel and bottom of the structure are 115/165/195mm.

Structure for constructing IP40 switchgear for operating theatres

Overall external dimensions ⁽¹⁾			Functional dimensions ⁽²⁾			Complete structure ⁽¹⁾	Spare parts

Completion items for installation on DIN rail

Supports for horizontal wiring duct

Allows assembly of the cabling wiring duct horizontally up to 60x80mm. The AD1009 plastic model can be positioned on the rear of the DIN rail, whereas the AD1037 metal version is fixed onto the brackets of DIN rail GD6002/GD8002, and allows adjustment of the wiring duct depth.

Kit for apparatus

DIN rail kits for System Pro-M modular apparatus, Tmax T1-T2-T3-XT1-XT3 moulded-case circuit-breakers and supports for Unifix H

DIN rail kit

Description	Dimensions (mm)	Code		Package/ No. of pieces
24 DIN mod W=600mm				
DIN rail kit (aluminium)		GD6002		1/1
DIN rail kit centre dist. 150mm (2 DIN rows)	600	GD6008		1/1
DIN rail kit reinforced for Tmax RC		GD6010		1/1
DIN rail kit with accessories		GC6002 (1)		1/1
36 DIN mod W=800mm				
DIN rail kit (aluminium)		GD8002		1/1
DIN rail kit centre dist. 150mm (2 DIN rows)	800	GD6009		1/1
DIN rail kit reinforced for Tmax RC		GD8010		1/1
DIN rail kit with accessories		GC8002 (1)		1/1

(1) DIN rail kit with accessories includes 60x80 wiring duct and related AD1037 fixing supports.

Supports for Unifix H

Description	Dimensions (mm)	Code		Package/ No. of pieces
Fixing supports for Unifix H series for panel H=300mm	600/800	AD1061		1/1

Kit for apparatus

Modular panels

Steel sheet panels complete with hinges placed on the right or left

Description	Dimensions (mm)		Code		Package/ No. of pieces
	H	W			
24 DIN mod W=600mm					
Modular panel 1 DIN row	200		PM2624		1/1
Modular panel 1 DIN row - Tmax RC	300		PM2312		1/1
Modular panel 1 DIN row only for Unifix H	300	600	PM3624		1/1
Modular panel 2 DIN rows interaxis 150mm	300		PM3648		1/1
Modular panel 3 DIN rows	600		PM6672		1/1
36 DIN mod W=800mm					
Modular panel 1 DIN row	200		PM2836		1/1
Modular panel 1 DIN row - Tmax RC	300		PM2315		1/1
Modular panel 1 DIN row only for Unifix H	300	800	PM3836		1/1
Modular panel 2 DIN rows interaxis 150mm	300		PM3872		1/1

Kit for apparatus

Supports for duct

Description	Code	Package/ No. of pieces
No.4 plastic supports for horizontal duct	AD1009	1/4
No.4 metal supports for horizontal duct	AD1037	1/4

Depth adapters

Enables the depth of miniature circuit-breakers to be adapted to that of moulded-case circuit-breakers mounted on the same DIN rail.

Description	Dimensions (mm)		Code	Package/ No. of pieces
	W	H		
No.1 depth adapter for Tmax T1-T2-T3 floor-standing	600		AP6000	1/1
No.1 depth adapter for Tmax T1-T2-T3 wall-mounting	600		AP6001	1/1

Blind back plates for and general apparatus

Description	Dimensions (mm)			Code	Package/ No. of pieces
	W	H	Code		
24 DIN mod W=600mm					
Blind back plate	200	PF2610 ⁽¹⁾			1/1
Blind back plate	400	PF4610 ⁽¹⁾			1/1
Recessed blind back plate	600	FR2601			1/1

Flat busbar

Copper busbars 1750mm in length drilled. Can be used both with linear BP0630 and scaled BP0634 busbar holders.

Description	Dimensions (mm) W	In (A)	Code		Package/ No. of pieces
No.2 copper busbars 15x5		250	BR0250		1/2
No.2 copper busbars 25x5	1750	400	BR0400		1/2
No.2 copper busbars 30x10		630	BR0630		1/2

Busbar holders

Busbar holders in insulating self-extinguishing material, certified in conformity with the EN 60439-1 Standard for an $I_{cc} \leq 35kA$

Description	Code		Package/ No. of pieces
No.2 linear busbar holders $I_n=630A - 32kA$	BP0630		1/1
No.2 terminal covers for linear busbar holders BP0630	BP0632		1/1

Crosspieces for flat busbars

Description	Mounting Pic.	Code		Package/ No. of pieces
Busbar vertically on back of structure or of cable container				
No.2 crosspieces back of structure W=600mm with BP4466	1	TV6200		1/2
No.2 crosspieces back of structure W=800mm with BP4466	1	TV8200		1/2
No.2 crosspieces back of cable container W=300mm with BP4466 or scaled BP4477	2	TV8200		1/2

Distribution system

Flexible busbars

Flexible busbars insulated in self-extinguishing material

Description	Dimensions (mm) W	In (A)	Code			Package/ No. of pieces
No.2 flexible busbars, section 20x3		250	BF1602			1/2
No.2 flexible busbars, section 20x5		400	BF2502			1/2
No.2 flexible busbars, section 24x6	2000	500	BF4002			1/2
No.2 flexible busbars, section 32x5		630	BF4012 ⁽¹⁾			1/2

⁽¹⁾ Only for circuit-breakers with front extended terminals or rear terminals.

4

Earthing busbars

Copper busbars drilled and threaded for rapid connection of the conductors.

Description	Dimensions (mm) W	Code			Package/ No. of pieces
No.2 earthing busbars 20x5 threaded M6		EV1119			1/2
No.2 earthing busbars 25x5 threaded M6	2000	EV1120			1/2
No.2 earthing busbars 50x5 threaded M6		EV1121			1/2

Insulators and copper busbars for neutral/earthing

Description	Code			Package/ No. of pieces
No.50 hexagonal insulators 30x30mm M6	EV1122			1/50
No.50 hexagonal insulators 30x30mm M8	EV1123			1/50
No.25 hexagonal insulators 36x50mm M6	EV1124			1/25

Accessories

Kits for placing structures side by side

The ArTu M switchgear can be placed side by side laterally. The IP65 side-by-side kit consists of a set of supports and a gasket for keeping the degree of protection.

In the IP31 version, in addition to kit AD1012, order the double finishing section (see table on page 4/26).

Description	Code	Package/ No. of pieces
Kit for laterally placing structures side by side H=1400-1600-1800-2000mm	AD1012	1/1

4

Brackets for wall fixing

These allow ArTu M switchgear to be fixed to the wall.

Description	Code	Package/ No. of pieces
No. 4 wall fixing brackets	AA1206	1/4

Lifting eyebolts

These allow cabled switchgear to be lifted. They are made of steel treated with white passivated galvanisation.

Description	Code	Package/ No. of pieces
No. 2 steel M12 lifting eyebolts	AA9600	1/2

Lifting reinforcements

Allow several pieces of ArTu M switchgear to be handled side by side.

Description	Code	Package/ No. of pieces
No. 2 lifting reinforcements for side-by-side structures	SA1350	1/2

Accessories

Crosspieces for accessories

Can be mounted on the structure to anchor the cables or to mount accessories. The crosspieces for accessories can be mounted on the side, on the rear or in the cable container of the structure.

Description	Mounting Pic.	Code		Package/ No. of pieces
No. 2 Structure lateral crosspieces D=250mm	1	TR2001		1/2
No. 2 External cable container rear crosspieces W=300mm	2	TR3001		1/2
No. 2 Internal cable container crosspieces W=200mm	3	TV2000		1/2

Horizontal shelf

Non-supporting horizontal shelf which allows separations to be made inside floormounted ArTu M switchgear. In structure with W=800 with internal cable container, use SH6001.

Description	Dimensions (mm)		Code	Package/ No. of pieces
	W			
24 DIN mod				
Horizontal shelf for structure	600		SH6001	1/1
36 DIN mod				
Horizontal shelf for structure	600		SH8001	1/1

Diagram pocket

The diagram pocket (made of plastic RAL 2004 colour, dim. HxW 237x265mm type A4) is applied inside the blind doors/panels of suitable dimensions, using the adhesive provided.

Description	Code	Package/ No. of pieces
Plastic diagram pocket	AA5600	1/1

ArTu K Modular Structures

General

The structure is made entirely of hot galvanised steel sheet, which guarantees the equipotentiality of the switchgear.

The K series of ArTu switchgear consists of a series of components for configuration of floor-standing kit switchgear, with the following dimensions:

- **three heights (useful)**

1600 mm (16 modules of 100 mm), 1800 mm (18 modules of 100 mm) and 2000 mm (20 modules of 100 mm) to which the h=100mm base strip measurement fitted with removable flanges must always be added;

- **four widths (useful)**

390mm (12 DIN modules), 600 mm (24 DIN modules), 800 mm (36 or 24 DIN) and 1000 mm (48 or 36 DIN modules + cable riser);

- **six depths (useful)**

150 mm (for Tmax T6 up to fixed 630A S6) 225mm (for Tmax up to fixed 800A S6), 300mm (for Tmax T7 1600A), 500 mm (for Tmax to fixed T71600A), 700mm (for Emax up to withdrawable E3 3200A) and 900mm (for Emax up to withdrawable E6 6300A). Tmax XT series can be installed in each one of the above-mentioned depths.

The structure is made entirely of hot galvanised steel sheet, which guarantees the equipotentiality of the switchgear. Base and top are supplied pre-mounted by means of a three-way joint, which is able to provide considerable structural rigidity. Base and top

The ArTu switchgear doors are made of 15/10 steel sheet for blind versions or with 4 mm thick glass fitted with gasket able to grant IP65 degree of protection.

are supplied pre-mounted by means of a three-way joint, which is able to provide considerable structural rigidity. The base is fitted with removable flanges which allow entry into the areas reserved for the cables and a pre-mounted (H=100mm) base strip, consisting of four angle irons with removable over the whole perimeter. The four uprights are fitted with a multi-purpose hinge used to assemble the door and to couple the structures, both laterally and at the rear.

The structure is completed with two types of functional frames, fitted with reference nicks (at 100 mm pitch) to avoid annoying measurements during assembly of the apparatus kits:

- open functional frame (can be used in switchgear where no form of segregation is required);
- closed functional frame (can be used in switchgear where forms 2-3 and 4 segregation are required).

The switchgear is completed with:

- blind (IP65) and ventilated (IP41) type side panels;
- blind and transparent doors, fitted with safety glass which can be mounted on all sides (IP65).
- kit for installing the apparatus, designed to integrate enclosure structures and circuit-breaker perfectly .

The mounting positions are established previously so as to guarantee the insulation distances and perfect alignment of the apparatus on the front panel. Furthermore, the kit plates are of the self-centring type and are fitted with threaded bushings to provide easy assembly of the apparatus from the front.

- DIN rail kit consisting of a drawn piece of aluminium able to resist the load of the circuit-breakers fitted with fixing brackets

ArTu K Modular Structures

General

Additional structure 300mm wide are available, which can be used as cable containers placed side by side laterally with all the ArTu K switchgear.

(patented), preset to house the vertical and horizontal cabling duct. The aluminium DIN rail has three established mounting positions, corresponding respectively to the, T and XT series depths of the System Pro M, Tmax and Isomax circuit-breakers. It is fitted with double DIN 35 section (front and rear), and the rear part can be used to support the duct, up to 60x80mm;

- kit for air circuit-breakers consisting of sturdy supporting crosspieces and of the front panel;
- universal kits, consisting of back plates and blind front panels, which allow assembly of generic apparatus.

The panels have vertical 100mm modularity and are fitted with an invisible hinge on the outside, which can be mounted either on the

right or on the left, and which guarantees panel earthing, making the equipotential connection superfluous.

The DIN panels are also available in the versions for one, two or three rows, corresponding to heights of 200, 300 and 600mm respectively and can have 150/200mm centre distance between the rows.

In the case of modular and moulded-case circuit-breakers placed side by side in the same row, the special section must be used which allows the assembly position of the circuit-breakers to be adapted correctly so that the same modular panel can be used.

When the circuit-breakers do not take up the whole window of the panel, the spaces can be closed using the hole covers.

Within the K series of ArTu switchgear with 500, 700 and 900mm

Within the K series of ArTu switchgear with 500, 700 and 900mm depths, segregation compartments of Form 2, 3 and 4 can be made in conformity with the IEC 60439-1 Standard.

depths, segregation compartments of Form 2, 3 and 4 can be made in conformity with the IEC 60439-1 Standard, for the whole range of moulded-case circuit-breakers with rear terminals, simply by using the closed functional frame, the installation kits in the segregated version and the special segregations.

The distribution systems, which can be used inside the ArTu switchgear, consist of:

- shaped section busbars up to 3200A;
- flat busbars up to 6300A;
- flexible busbars;
- Unifix cabling system, structured up to 400A;
- dividers up to 400A.

The extremely compact dimensions of the system allow the busbars to be mounted directly inside the switchgear, positioning them horizontally or vertically, on the back or on the side of the structure, keeping front access, also thanks to the practicality of the scaled type busbar holder.

The panels have vertical 100mm modularity and are fitted with an invisible hinge on the outside, which can be mounted either on the right or on the left, and which guarantees panel earthing, making the equipotential connection superfluous.

The extremely compact dimensions of the system allow the busbars to be mounted directly inside the switchgear, positioning them horizontally or vertically, on the back or on the side of the structure.

Technical characteristics

Compliance with Standards	CEI EN 60439-1/IEC 61439-1-2
Test of vibration for structure ArTu K	according to IEC 60068-2-57 Standard
Test of antiseismic	according to IEE Std 693 Standard
Rated service voltage Ue	up to 1000 V
Rated insulation voltage Ui	up to 1000 V
Rated frequency	50-60 Hz
Rated impulse withstand voltage Uimp	8 kV
Rated current In	up to 6300 A
Rated short-time short-circuit withstand current Icw	up to 105 kA
Rated peak short-circuit current IpK	up to 254 kA
Degree of protection IP	31 without door 41 without door with accessories 65 with door up to 4000A 41 with door up to 6300A

⁽¹⁾ The overall external dimensions of the ArTu K switchgear include the base strip h=100mm and the side panels, each 14mm wide.

⁽²⁾ The functional dimensions represent the useful space for installing the apparatus.

⁽³⁾ In this catalogue, reference is always made to the following depths: functional 150/225/300/500/700/900 mm external 287/362/437/637/837/1037 mm.

⁽⁴⁾ The VC.... code is already complete with the functional frame, therefore it is not necessary to order other open or closed functional frames. Furthermore, the internal cable container is only built with 800/1000mm wide structures. The rear intermediate upright SK2080 (H=2000mm) in switchgear without segregation must be ordered separately if necessary for fixing onto the back of crosspieces, accessories, busbars, etc

The positioning of two structures or a structure and a cable container side-by-side is realized by the AD1014 kit. When selecting the components, the characteristics of the apparatus to be mounted inside the switchgear must be taken into consideration, opting for the open frame and cable container when no form of segregation is required and, on the contrary, for the closed frame and cable container when forms of segregation from 2 to 4 are required. According to the type of covering selected, the degree of protection varies from IP31/41 (switchgear without front door) to IP65 (switchgear with front door and blind side panels).

The functional frames of ArTu K switchgear are available in two versions:

- switchgear without segregation (open frame) in cases where no form of segregation is required;
- segregated switchgear (closed frame) in cases where forms 2-3 and 4 segregation are required

⁽²⁾ The functional dimensions represent the useful space for installing the apparatus.

⁽³⁾ In this catalogue, reference is always made to the following depths: functional 150/225/300/500/700/900 mm external 287/362/437/637/837/1037 mm.

⁽⁴⁾ The VC.... code is already complete with the functional frame, therefore it is not necessary to order other open or closed functional frames. Furthermore, the internal cable container is only built with 800/1000mm wide structures. The rear intermediate upright SK1880 (H=1800mm) in switchgear without segregation must be ordered separately if necessary for fixing onto the back of crosspieces, accessories, busbars, etc

The positioning of two structures or a structure and a cable container side-by-side is realized by the AD1014 kit. When selecting the components, the characteristics of the apparatus to be mounted inside the switchgear must be taken into consideration, opting for the open frame and cable container when no form of segregation is required and, on the contrary, for the closed frame and cable container when forms of segregation from 2 to 4 are required. According to the type of covering selected, the degree of protection varies from IP31/41 (switchgear without front door) to IP65 (switchgear with front door and blind side panels).

The functional frames of ArTu K switchgear are available in two versions:

- switchgear without segregation (open frame) in cases where no form of segregation is required;
- segregated switchgear (closed frame) in cases where forms 2-3 and 4 segregation are required

Functional frames switchgear without segregation			Functional frames for segregated switchgear		Side coverings front and rear coverings IP65

⁽¹⁾ The overall external dimensions of the ArTu K switchgear include the base strip h=100mm and the side panels, each 14mm wide.

⁽²⁾ The functional dimensions represent the useful space for installing the apparatus.

⁽³⁾ In this catalogue, reference is always made to depths 287/362/437/637/837/1037mm corresponding to overall external dimensions 150/225/300 500/700/900mm.

Additional structure 300mm wide are available, which can be used as cable containers placed side by side laterally with all the ArTu K switchgear. In the same way as the structures, the additional cable container is made up of a base, top, base strip and uprights and is fixed to the structures using the side-by-side kits (AD1014). It is completed with the side panels and the doors (to be ordered separately). The external doors are used on the additional cable container to be placed side by side with an ArTu structure with door (IP65); the internal doors are used on the additional cable container placed side by side with an ArTu IP31 version structure (i.e. without door and with finishing sections). This ensures uniformity of appearance between the structure and additional cable container. Furthermore, the internal doors can be used as internal segregations of the cable container: should a segregation with door open of the additional cable container be requested, it is possible to mount both the internal and external door at the same time.

Completion items for installation on DIN rail

Supports for horizontal wiring duct

Allows assembly of the cabling wiring duct horizontally up to 60x80mm. The AD1009 plastic model can be positioned on the rear of the DIN rail, whereas the AD1037 metal version is fixed onto the brackets of DIN rail GD6002/GD8002, and allows adjustment of the wiring duct depth.

Code	Description
AD1009	Horizontal wiring duct (plastic) supports
AD1037	Horizontal wiring duct (metal) supports

Depth adapter

Kit OT160/200/250/315/400 horizontal	K02281	600	600	E03-04	Lateral	80mm (Ø6)-125mm (Ø12)	130mm (Ø6)-166mm (Ø12)

Apparatus of the OETL series up to 400A and OESA up to 160 A (in both cases not motor operated) can be installed inside the floor-mounted ArTu K switchgear. According to the dimensions of the apparatus, a plain back plate must be used (PF or FR...) and a panel (PC or PR...) of appropriate height and depth must be used. The useful space between panel and door is 50mm. For larger-sized handles, use plain recessed panels PR... (see dimensions in table).

> Selection by components page 5/53 > In-depth technical information page 6/1 > Overall dimensions page 7/1

Emax E4 Full size	4	600			KE4000			KE5237
Emax E6 50% Neutral	3/4	600			KE6342			KE6341

The kit for installing Emax air circuit-breakers in the versions of switchgear indicated includes the pre-drilled front panel and the resting crosspieces. To install Emax E1...E3 circuit-breakers, always use 700mm depth (therefore also depth 900mm with kit SK..81), for Emax E4 use structures with 900mm depth or several structures placed side by side at the rear. It is necessary to install one E6 breaker per column (depth D=900 mm), at a maximum height of H=1100 mm; moreover, under the E6 breaker it is not possible to install any other device.

⁽¹⁾ This kit can also be used for motor operated, interlocked and interlocked motor operated version.

⁽²⁾ For the 4P version neutral 50%

^(*) Kit for a single circuit-breaker.

Emax E4 Full size	4	600			KE4100			KE5236
Emax E6 50% Neutral	3-4	600			KE6340			KE6343

The kit for installing Emax air circuit-breakers in the versions of switchgear indicated includes the pre-drilled front panel and the resting crosspieces. To install Emax E1...E3 circuit-breakers, always use with 700mm depth (therefore also depth 900mm with kit SK..81), for Emax E4 use structures with 900mm depth or several structures placed side by side at the rear It is necessary to install one E6 breaker per column (depth D=900 mm), at a maximum height of H=1100 mm; moreover, under the E6 breaker it is not possible to install any other device.

To complete the 36 module structure, ask for the special back plates (PF.... see page 5/28).

⁽¹⁾ This kit can also be used for the motor operated version.

⁽²⁾ This kit can also be used for the motor operated, interlocked and interlocked motor operated versions.

^(*) Kit for a single circuit-breaker.

ArTu K Modular Structures

Selection of the structure

Form 2-3-4 segregations for structures D≥500mm

Segregations according to the IEC 60439-1 and IEC 61439 -1 -2 Standards

By form of segregation, the type of subdivision provided inside the switchgear is meant. Segregation by means of barriers or partitions (metallic or insulating) can have the purpose of:

- Ensuring protection against direct contacts (at least IPXXB), in the case of accessing a part of the switchgear with the power turned off, in relation to the rest of the switchgear left live.
- Reducing the probability of an internal arc striking and propagating.
- Preventing passage of solid bodies between different parts of the switchgear (at least IP2X degree of protection).

By partition, the separation element between two compartments is meant, whereas the barrier protects the operator against direct contacts and the effects of an arc of the breaking apparatus in the normal access direction.

Symbol	Form 1 (no internal segregation)	Form 2 (segregation of the busbars from the functional units)	Form 3 (separation of the busbars from the functional units + separation of the functional units from each other)	Form 4 (separation of the busbars from the functional units + separation of the functional units from each other + separation of the terminals from each other)
 		<p>Form 2a Terminals not separated from the busbars</p> 	<p>Form 3a Terminals not separated from the busbars</p> 	<p>Form 4a Terminals in the same compartment as the associated functional unit</p> 
Caption a Housing b Internal segregation c Functional units including the terminals for the associated external conductors d Busbars, including the distribution busbars		<p>Form 2b Terminals separated from the busbars</p> 	<p>Form 3b Terminals separated from the busbars</p> 	<p>Form 4b Terminals not in the same compartment as the associated functional unit</p> 

Note

The segregations can be made in ArTu K 390 and 600mm wide switchgear in 500/700/900mm depths with closed functional frame and segregated kits. Form 2 is obtained automatically using the segregated type kits.

To obtain the desired form of segregation, the segregations kits relative to the previous forms must be ordered (e.g. Form 4 = Form 2 kit + Form 3 kit + Form 4 kit).

Selection and assembly of flat busbars and busbar holders

Using the correct number of busbar holders ensures resistance to electrodynamic forces in the case of a short-circuit. Assess the maximum distance (max X) not to be exceeded between two consecutive busbar holders according to the max. I_{cc} .

The distance between the first busbar holder and the end of the busbar must not exceed $\frac{1}{4}$ of "X".

⁽¹⁾ Select circuit-breakers in version with front terminals for copper cables.

⁽²⁾ ArTu D=150mm.

Unifix systems

5

Direct connection with the 400/800A system of busbars with shaped section.

Feeder module for 400A frame (L1-L2-L3-N).

Direct power supply of the bases by means of feeder module ED2209.

Power supply by means of general row circuit-breaker.

Connections (L1-L2-L3-N) for System Pro M modular apparatus.

Power supply of the busbar with 100A feeder module without cable. Terminal capacity 35mm².

Direct power supply of the busbars by means of feeder module.

Power supply by means of modules and cables in parallel.

STRUCTURES WITHOUT SEGREGATION/SEGREGATED Structure

IP 31 Finishing section

For IP31 version switchgear (without door), use the special finishing kits already sized for the standard heights and widths of ArTu switchgear. In the case of switchgear placed side by side, use the special double IP31 kit on the joining uprights.

⁽¹⁾ To complete with universal segregation SH 4000, SH 6000, SH 8000 (see page 5/86).

STRUCTURES WITHOUT SEGREGATION/SEGREGATED Structure

Internal cable container for switchgear without segregation (open frame)

Only to be ordered for the 36 DIN mod. structures ($W=800\text{mm}$). Consisting of a pair of functional uprights and a blind door complete with two key locks. Can be mounted either on the right or left.

Description	Dimensions (mm)			Package/ No. of pieces
	H	W	Code	
Reduced framed for structures $P \leq 300\text{mm}$				
Not segregated internal cable container	1600	200	VC1624	1/1
Not segregated internal cable container	1800	200	VC1824	1/1
Not segregated internal cable container	2000	200	VC2024	1/1
Standard framed for structures $P \leq 300\text{mm}$				
Not segregated internal cable container	1800	200	VC1823	1/1
Not segregated internal cable container	2000	200	VC2023	1/1

Rear riser for unsegregated internal cable container

Kit consisting of 2 unsegregated functional frames and one blind door. The rear riser SK1880 ($H=1800\text{mm}$) and SK2080 ($H=2000\text{mm}$) in the unsegregated structures must be ordered separately if needed for fixing onto the rear of crosspieces, accessories, busbars, etc.

Description	Dimensions (mm)			Package/ No. of pieces
	H	Code		
Internal cable container rear riser	1800	SK1880		1/1
Internal cable container rear riser	2000	SK2080		1/1

Internal cable container for segregated switchgear (closed frame)

Only to be ordered for the $W=800\text{mm}$ structures. Kit consisting of 2 functional segregated frames, a blind door and a rear upright for fixing onto the back of crosspieces, accessories, busbars, etc. Can be mounted either on the right or left.

Description	Dimensions (mm)			Package/ No. of pieces
	H	W	Code	
Internal cable container for segregated switchgear $D \geq 500\text{mm}$				
Segregated cable container	1800	200	VC1820	1/1
Segregated cable container	2000	200	VC2020	1/1

STRUCTURES WITHOUT SEGREGATION - Kit for switchgear with standard frame D≥225mm

Kit for apparatus

Back plates

Description	Dimensions (mm)			Code	Package/ No. of pieces
	W	H			
24 DIN mod. - W=600mm					
Galvanised sheet back plate	600	1800	PF1806		1/1
Galvanised sheet back plate		2000	PF2006		1/1
36 DIN mod. - W=800mm					
Galvanised sheet back plate	800	1800	PF1808		1/1
Galvanised sheet back plate		2000	PF2008		1/1

Tracks for back plate

Description	Dimensions (mm)		Code	Package/ No. of pieces
	D			
Pair of tracks + crosspieces	225		AD1049	1/1
Pair of tracks + crosspieces	500		AD1050	1/1
Pair of tracks + crosspieces	700		AD1051	1/1

SEGREGATED STRUCTURES- Kit for switchgear with segregated frame D \geq 500mm

Kit for apparatus

DIN rail kit for System Pro-M modular, Tmax T1-T2-T3-XT1-XT3, moulded-case circuit-breakers

DIN rail kit

Description	Dimensions (mm)		Code			Package/ No. of pieces
	W	H				
12 DIN mod. - W=390mm						
DIN rail kit (aluminium)	390		GD4005			1/1
24 DIN mod. - W=600mm						
DIN rail kit (aluminium)	600		GD7005			1/1
36 DIN mod. - W=800mm						
DIN rail kit (aluminium)	800		GD9005			1/1
48 DIN mod. - W=1000mm						
DIN rail kit (aluminium)	1000		GD1001			1/1

Blind back plates for general apparatus

Description	W	Dimensions (mm)		Code		Package/ No. of pieces
		H				
12 DIN mod. - W=390mm						
Blind back plate	390	200		PF2405		1/1
Blind back plate		300		PF3405		1/1
Blind back plate		400		PF4405		1/1

STRUCTURES WITHOUT SEGREGATION/SEGREGATED

Accessories

Structure side-by-side kit

The ArTu K switchgear can be placed side by side both laterally and at the rear. The IP65 side-by-side kit consists of a set of supports and a gasket for keeping the degree of protection. In the IP31 version, in addition to the AD1014 kit, order the double finishing section (see page 5/59).

Description	Code	Package/ No. of pieces
Kit for placing structures H=1600-1800-2000mm side by side laterally	AD1014	1/1

Lifting eyebolts

These allow cabled switchgear to be lifted. They are made of steel treated with white passivated galvanisation.

Description	Code	Package/ No. of pieces
No.4 steel M12 lifting eyebolts	AA9600	1/4

Lifting reinforcements

These allow handling of several ArTu K switchgear placed side by side.

Description	Code	Package/ No. of pieces
lifting reinforcements for side-by-side structures	SA1350	1/2

Brackets for fixing to the wall

Allow fixing of ArTu K switchgears to the wall.

Description	Code	Package/ No. of pieces
No.2 brackets for fixing to the wall	AD1808	1/2

One-piece quake-proof base compartment

Base compartment in a single piece with reinforcing tubes installed at depth. Allows adjacent switchgear accessories with particularly heavy components to be lifted. Height 100 mm, length up to 6 meters. RAL7012 grey colour with orange-peel finish. The number of reinforcing tubes depends on the length of the bank.

Description	Code	Package/ No. of pieces
One-piece base compartment H=100 mm for adjacent switchgear	ZK1100	1/1

- Must be designed in a special dedicated way for each configuration. Always attach the drawing of the front view of the switchgear bank and specify the width, depth and switchgear sequence of each column.
- Unit of measurement for ordering: METER.
- Available in lengths of up to 6 m.

STRUCTURES WITHOUT SEGREGATION/SEGREGATED Accessories

Kits for seismic hazard zones

Anti-quake tests performed

The tests provide a reference for comparison with dimensionally similar configurations and with regard to the load distributed within them. They concern 3 columns measuring 2 x 2231x910x636 mm (including base compartment) + 1 x 2231x720x636 mm (including base compartment). Total length=2540 mm with busbar system and internal electrical components weighing about 1,500 kg (fig.1), and points for fixing to the floor with M12 bolts.

The switchgear was tested in accordance with standard IEC 60068-2-57 "Environmental testing Part. 2: Test method. Vibration - Time history method" and standard IEE Std 693 "Recommended Practice for Seismic Design of Substation".

Roof ventilation

Allows the roof of the cabinet to be raised thereby increasing ventilation and therefore the power which can be dissipated. The degree of protection is IP20. The ventilation kit must not be mounted if the cabinet has to be lifted using the eyebolts. In this case, the kit must be mounted when installation has been completed.

Gemini switchboards

Compliance with Standards and technical characteristics

References Standard

The IEC 62208 Standard ("Empty enclosures for assembled protection and operating apparatus for low voltage. General Prescriptions") has implemented the EN 50298 Standard reissued in EN 62208 internationally, and is the reference for the Gemini switchboards: as its subject, it has formulation of the definitions, classifications, characteristics and testing prescriptions for enclosures destined for uses in accordance with the EN 60439 Standards and the new IEC 61439-1-2 Standard as part of protection and operating apparatus (switchboards), whose rated voltage does not exceed 1000 V in alternating current for frequencies up to 1000 Hz or 1500 V in direct current and suitable for general use in both indoor and outdoor applications.

The Standard refers to empty enclosures, before the user installs protection and operating apparatus.

The Standard does not apply to enclosures which, due to their construction and functional characteristics, are subject to other prescriptions (e.g. enclosures for domestic and similar installations). In this case, the IEC 60670 – CEI 23-48 Standards are the reference ("Enclosures for apparatus for fixed electrical installations for domestic and similar uses.

6

Part 1: general prescriptions") and CEI 23-49 ("Enclosures for apparatus for fixed electrical installations for domestic and similar uses.

Part 2: special prescriptions for enclosures destined to contain protection devices and apparatus which dissipate a power that is not negligible").

On the basis of what is indicated by ABB SACE in the table of technical characteristics, if, necessary, the installer must certify conformity with the CEI 23-51 ("Prescriptions for constructing, checking and testing distribution switchboards for fixed installations for domestic and similar use") or EN 60439-1/IEC 61439-1-2 Standards.

- Rated insulation voltage DC	≤ 1500 V					
- Rated impulse withstand voltage	8 kV					

⁽¹⁾ **Limits of Applicability of the CEI 23-51 Standard**

The Standard is only applicable if the cabled switchboard fulfils all the following conditions:
fixed installation with average ambient temperature up to 25 °C, occasionally up to 35 °C;
alternating current with rated voltage up to 440 V;
rated incoming current up to 125 A;
rated prospective short-circuit current up to 10 kA or protection using current-limiting devices with limited current up to 15 kA in correspondence with their rated breaking capacity.

⁽²⁾ The data on the maximum dissipated power were taken following the indications in the CEI 23-49 Standard, with a temperature difference of Dt=30 °C.

⁽³⁾ **Note to paragraph 8.2.1 of Standard CEI EN 60439-1**

The table gives the thermal dissipation values of Gemini switchboards when they are wall-mounted. The dispersible power figures (in Watts) vary according to the overtemperature allowed in the accessible parts of the switchboard and must be compared with the total amount of power dissipated by all the components installed inside the switchboard taking into due account the factor of contemporaneity.

In-depth technical information

Gemini switchboards

IP degree of protection

1st number according to EN 60529 Standard

As indicated in the following table, the IP degree of protection is expressed by two characteristic numbers depending on the behavior of the product to which it refers according to the prescriptions of CEI 70-1 and IEC 529 Standards.

1st Number: protection against the penetration of solid bodies

1

No protection

2

Protection against the penetration of solid bodies with a diameter of over 50 mm

3

Protection against the penetration of solid bodies with a diameter of over 12 mm or a length of over 80 mm

4

Protection against the penetration of solid bodies with a diameter or thickness of over 2.5 mm

5

Protection against the penetration of solid bodies with a diameter or thickness of over 1.0 mm

6

Protection against the penetration of dusts

7

Total protection against the penetration of dusts

Gemini

2nd number according to CEI 70-1 IEC 60529 Standard

With IP66 degree of protection, Gemini switchboards are totally protected against the penetration of dusts and sprays of seawater.

2nd Number: protection against the penetration of water

1

No protection

2

Protection against the penetration of drops of water falling vertically

3

Protection against the penetration of drops of water falling at an angle of up to 15° from vertical

4

Protection against the penetration of drops of water falling at an angle of up to 60° from vertical

5

Protection against the penetration of splashes of water from all directions

6

Protection against the penetration of water sprayed by a hose from all directions

7

Protection against the penetration of sea water

8

Protection against the penetration of water during temporary immersion

9

Protection against the penetration of water during continual immersion

IK degree of resistance to impacts

IK degree according to EN 62262 reference Standard.

The method specified in the EN 62262 Standard to determine the IK degree of resistance to impact is indicated in the table below. It specifies the resistance of equipment to impact. The proof

consists in letting a weight falling down from a pre-established height. The degree of resistance to impacts is therefore obtained and it is expressed in Joules

IK 0

No protection against impacts

IK 01

Resistance to impacts with impact energy up to **0,150 J**

IK 02

Resistance to impacts with impact energy up to **0,200 J**

IK 03

Resistance to impacts with impact energy up to **0,350 J**

IK 04

Resistance to impacts with impact energy up to **0,500 J**

IK 05

Resistance to impacts with impact energy up to **0,700 J**

IK 06

Resistance to impacts with impact energy up to **1,00 J**

IK 07

Resistance to impacts with impact energy up to **2,00 J**

IK 08

Resistance to impacts with impact energy up to **5,00 J**

IK 09

Resistance to impacts with impact energy up to **10,00 J**

IK 10

Gemini

Resistance to impacts with impact energy up to **20,00 J**

In-depth technical information

Gemini switchboards

Double insulation

Double insulation guarantees that Gemini is protected against indirect contacts on condition that the manufacturer's instructions are observed when carrying out mounting and wiring operations on the switchboard and that the appropriate accessories are used (e.g. screw-cover caps).

Self-extinguishing tests

Test text	Equipment required	Compliance with Standards	Purpose of the test	Test results	Test conditions			Character elements
					Heat source	Length of test		
Glow wire (GLOW WIRE TEST)		IEC 695-2-1 CEI 50-11	To assess the danger of fire by simulating thermal stresses produced by heat sources or by ignition (e.g. glowing elements, resistances overloaded for short intervals)	If a flame is generated, it must go out within 30 seconds of removing the glow wire. The test is conducted at temperatures of: - 650°C - 750°C - 850°C - 960°C	Glow wire ø 4 mm	30 sec.		Assessment of the time it takes for the flame to go out

Resistance to chemical agents

The behavior of Gemini switchboards in the presence of chemical agents is indicated in the table with the symbols:

	High resistance	Limited resistance
Cold water	•	
Hot water	•	
Sulfuric acid 50%	•	
Hydrochloric acid 36%	•	
Acetic acid 60%	•	
Benzol		•

Gemini switchboards

Disposal instructions

Information about how to dispose of Gemini switchboards when they reach the end of their life

Instructions are given below about the procedures to adopt when disposing of Gemini switchboards at the end of their life cycle. The text is drafted in the form of a table referring to Standard CEI 308-1 "Information table concerning the end of life of electric and electronic products and a compilation guide", 2002-04, ed. 1, pamphlet number 308-1 6454.

Section I – Global product specification

Name		Type of product			
Size		With transparent door	With opaque door	Rated weight [kg]	External dimensions WxHxD (mm)
1		1SL0211A00	1SL0201A00	4,3	335x400x210
2		1SL0212A00	1SL0202A00	7,9	460x550x260
3		1SL0213A00	1SL0203A00	9,5	460x700x260

Disposal instructions

Section III – Components to be removed from the product and sent for separate treatment

Refer to section II of the table for a description of the materials.

Notes for recovery and disposal

At the end of its life, after separating it from components, the product can be sent to be recovered.

The product is not biodegradable: do not dispose of it in the environment.

The product/waste product is assimilable as solid urban waste. It must be incinerated or disposed of in compliance with current EEC, national and local regulations. You are recommended to check all reutilization possibilities.

Other recommendations

The information in this table relates to the product in the condition it was supplied. Assembled parts coming from different supplies must be treated separately according to the reference specifications of the respective manufacturers.

Section IV – Safety instructions

Handling

No special instructions. Refer to the general regulations concerning hygiene on the workplace when using.

The product's main components contain mineral additives and coloring agents in concentrations that comply with current European Directives at the time this catalogue went to press: they do not contain substances classified as dangerous.

Transport

No special instructions.

Storage

No gas or harmful vapors are released during storage. Thermal decomposition in the event of fire or combustion may release dangerous products: if this should occur, specific means of protection must be used. In the event of fire, conventional fire extinguishing instruments are recommended (atomized water, foam, carbon dioxide, powder).

Empty packages are not contaminated by the product and can therefore be recycled or reused.

Utilization

No special instructions.

Other instructions

The information given in this section is based on current ABB SACE know-how and is aimed at describing the product only for environmental, health and safety purposes. It must not, therefore, be considered as a guarantee of specific properties. ABB SACE assumes no responsibility for the behavior of buyers that do not comply with the information given in this table and for incorrect or improper usages of the product or usages that cannot reasonably be envisaged.

In-depth technical information

ArTu distribution switchgear

Mechanical and electrical characteristics

Conformity with the CEI EN 60439-1/IEC 61439-1-2 Standard

The ArTu switchboards have undergone the type tests foreseen by the CEI EN 60439-1 Standard and the new IEC 61439-1-2 Standard at the ABB type test laboratories. The results of these tests guarantee the performances of the ArTu switchboards and allow the end constructor of the switchboard using ABB SACE metal structures, air, moulded-case and modular circuit-breakers, not to carry out further type tests, respecting the selection criteria and the assembly instructions of the various components. These results, given below, can be referred to for drawing up the declaration of conformity of the electric switchboard.

Overtemperature (Ref. par. 8.2.1. of the Standard)

In the tables on page 5/5 and following, the thermal dissipation values are indicated, referring to all the dimensions of the ArTu switchboards and to the type of installation, deriving from the type tests carried out. The dissipated power data (in Watts) are according to the admissible overtemperature inside the switchboard in the upper part, and must be compared with the sum of the powers dissipated by all the components installed inside the switchboard (taking appropriately into account the factor of contemporaneity).

6

Dielectric properties (Ref. par. 8.2.2 of the Standard)

(Ref. par. 8.2.4.1):	Following the assembly indications of the metal components, the effective electrical continuity between the exposed conductive parts is verified, with negligible resistance values.				
	(Ref par. 8.2.4.2):	Protection circuit short-circuit withstand current: phase-earthing busbar			
	9 kA (1s)	21 kA (1s)	9 kA (1s)	21 kA (1s)	60 kA (1s)

Insulation distances (Ref. par. 8.2.5 of the Standard)

The insulation distances are guaranteed by following the ABB SACE metalwork structure and circuit-breaker assembly and mounting instructions.

Mechanical operation (Ref. par. 8.2.6 of the Standard)

Mechanical operation is verified by following the assembly and mounting instructions for the ABB SACE metalwork structures and circuit-breakers.

Degree of protection (Ref. par. 8.2.7 of the Standard) According to CEI EN 60529 (CEI 70-1 publication IEC 529)

In-depth technical information

ArTu distribution switchgear

ABB SACE declaration of conformity

ArTu switchgear with the following rated characteristics:

Rated service voltage	up to 690V / up to 1000V for ArTu K	
Rated insulation voltage	up to 1000V	
Rated current / ICW	ArTu L wall-mounted	up to 250 A / 25 kA
	ArTu L floor-mounted	up to 800 A / 35 kA
	ArTu K	up to 4000 A / up to 105 kA
	ArTu M floor-mounted and K D=250mm	up to 630 A / 35 kA
	ArTu M D=150/200mm	up to 250 A / 25 kA
Grado di protezione	ArTu L	IP31 (without door), IP 43 (with door)
	ArTu K	IP31 (without door), IP41 (with door and side ventilation), IP65 (with door)
	ArTu M D=250mm	IP31 (without door), IP65 (with door)
	ArTu M D=150/200mm	IP 65 (with door)

When correctly selected and assembled, as per the indications given in this catalogue and in the instruction manual, allow construction of switchgear complying with the IEC 60439-1/IEC 61439-1-2 Standard, on the basis of what is foreseen by the Low Voltage Directive of the European Community (Directive 73/23/EEC, Law 791/1977).

6

The above is valid if the switchgear is designed and constructed:

- selecting the materials according to the performances indicated in the ABB catalogues;
- sizing the conductors according to the prescriptions of the IEC 60439-1 and CEI 64-8 Standards;
- carrying out the individual tests foreseen under the IEC 60439-1 Standard successfully.

Technical information

Information regarding the methods for disposal and end of product life

ABB SACE has carried out a study on the end of product life. Evaluation is made by means of applying the LCA (Life Cycle Assessment) method according to ISO 14040 - 1997 and in conformity with the requirements established by the SEMC in the document ISO TR 14025 TYPE III Environmental Declarations (MSR 1999:2 – “Guidelines for the Environmental Product Declaration”).

The study was carried out taking into consideration the disposal and recycling processes of the main materials making up a typical switchboard.

Starting from the basic list, the facility of dismantling and separating each piece, as well as recyclability of the materials was considered, and the product results as being almost completely recyclable.

Again starting from the basic list reduced to the significant components, the end of life of each of these was evaluated.

The flows of recyclable materials, materials to be recovered (or for incineration), given in the Table resulted. According to the hypotheses made, no material should end up directly in the dump.

Substance	Destination	
Aluminium waste	Recycling	
Copper waste	Recycling	
Polyurethane gaskets	Incineration	
Glass fibres	Recycling	
Glass waste	Recycling	
Paper/cardboard	Recycling	
Plastic Insulators	Recycling	
Sheet metal waste	Recycling

Dissipated power inside the ArTu switchgear according to the admissible overtemperature.

Handling

Handling with transpallet

Handling ArTu K structures by means of rollers: only with ZR... reinforced plinth

Dimensions	A (mm)	B (mm)	C (mm)	D (mm)
ArTu L				
Width 600mm	47	596	97	296
ArTu M				
Width 600mm	125,5	469	251	
Width 800mm	125,5	669	251	
ArTu K				
Width 400mm	125,5	259	251	
Width 600mm	125,5	469	251	
Width 800mm	125,5	669	251	
Width 1000mm	125,5	869	251	
Width 200mm (cable container)	125,5		251	69
Width 300mm (cable container)	125,5		251	169

For switchgear with reduced depth, the following type of handling is recommended:

For greater safety during transport using a fork-lift truck, it is advisable to anchor the switchgear to the truck:

In the case of structures W=1000mm (with internal or external cable container) containing busbar systems, check the centre of gravity before handling.

In-depth technical information

ArTu distribution switchgear

Handling

Handling with overhead travelling crane

To handle using a crane or overhead travelling crane, check the following conditions before lifting the switchgear:

- excellent state of the ropes or chains;
- the angle between the lifting ropes and the switchgear roof must be $\geq 45^\circ$;
- the maximum number of columns transported is 3;
- ArTu L maximum weight lifted as per DIN 580 (M8);
- ArTu M - K maximum weight lifted as per DIN 580 (M12) Standard.

To respect the conditions described above, a lifting beam with appropriate characteristics can be used when there are several columns side by side.

DIN 580 Standard regarding mechanical connection elements (only for lifting eyebolts)

Lifting eyebolts		Lifting reinforcements							
A	B (mm)	C (mm)	D (mm)	E (mm)	F (mm)	G (mm)	Load 1 (kg)	Load 2 (kg)	Tightening (Nm)
Lifting eyebolts									
ArTu L	M8	30	8	18	6	15	20	140	95
ArTu M-K	M12	54	12	28	10	22	30	340	240
Lifting reinforcements									
ArTu L	M8	Ø20	30	60	28	Ø10	40	210	140
ArTu M-K	M12	Ø40	37	80	25	Ø14	60	510	350

* Close by hand without mechanical elements in order to avoid overvoltage in the stem that will reduce the capacity of the lifting eyebolts

Electrical continuity of the structure and of the fixed and mobile parts

Electrical continuity in ArTu switchgear is guaranteed automatically just with assembly of the structure without the use of dedicated accessories.

In the case of mobile parts (e.g. front panels), electrical continuity is guaranteed in the closed position by the special shape of the hinge (ABB patent) which is always supplied with the panels.

The blind door, side panels and rear panels are fitted with copper M6 captive screws. Panel earthing is obtained thanks to the fixing screws.

Standard 61439-1

Part 8.4.2.2.2

Prescriptions for earth continuity for protection against the consequences of a fault within the switchgear

b) For covers, doors, closing plates and similar, the ordinary connections with metal screws and metal hinges are considered sufficient for electrical continuity so long as electrical devices that exceed the low voltage limits (ELV) are not installed on them.

The special shape of the hinge allows connection even using a traditional copper braid.

In-depth technical information

ArTu distribution switchgear

Calculation of the PE protection conductor

The IEC 60439-1 Standard indicates the methods of calculation for the cross-section of the PE protection conductor which must be suitably sized to withstand the thermal and dynamic components of the fault currents. In identifying the fixing position of the busbar, check the following conditions:

- the busbar must be connected directly to the switchgear exposed conductive parts (structure);
- the busbar must be connected in an easily accessible position.

For sizing, use the values in the table, taken from the IEC 60439-1 Standard CEI EN60439-1, IEC 61439-1-2.

S (mm ²)			Sp (mm ²)	
	S	≤	16	S
16	<	S	≤ 35	16
35	<	S	≤ 400	S/2
400	<	S	≤ 800	200
	S	≤	800	S/4

conductor section (25x4) 100mm²

The conductors must be connected singly.

ArTu K

Certified ACAE/LOVAG No. IT 11.079 with protection
conductor section (50x5) 250mm² (art. BR6305)

Equipotentiality

The accessible conductive parts of a device, which cannot be connected to the protection circuit by their own means of connection, must be connected to the protection circuit of the apparatus for equipotentiality of the protection by means of an equipotential conductor, whose section must be selected according to the table given below.

Rated service current I_e (A)			Minimum section of the equipotential protective conductor (mm ²)
20	<	I_e	≤ 20
25	<	I_e	≤ 25
32	<	I_e	≤ 32
63	<	I_e	≤ 63
			S
			2,5
			4
			6
			10

S = section of the phase conductor (mm²)

PEN conductor

The section of the PEN conductors of the apparatus must be determined using the same procedure followed for the neutral conductor (N). The minimum section of a copper conductor must be 10mm².

The PEN conductor does not need to be insulated.

The parts of the structure must not be used as a PEN conductor.

However, the assembly tracks, made of copper or aluminium, can be used as PEN conductors.

For conductors not made of copper, the sections above are replaced with equivalent conductivity sections, which may require larger sized terminals.

IP degrees of protection

1st NUMBER: protection against solid bodies

0 No protection

1 Protected against solid bodies larger than 50mm (accidental contact with hands)

2 Protected against solid bodies larger than 12 mm (fingers)

3 Protected against solid bodies larger than 2.5mm (tools, wires)

4 Protected against solid bodies larger than 1 mm

5 Protected against dust (no harmful deposit)

6 Totally protected against dust

1st number defined by the CEI EN 60529 – IEC 529 Standards

2nd NUMBER: protection against liquids

0 No protection

1 Protected against vertical fall of drops of water (condensation)

2 Protected against drops of water up to 15° from vertical

3 Protected against drops of water up to 60° from vertical

4 Protected against splashes of water from all directions

5 Protected against jets of water from all directions by means of a hose

6 Protection against jets of water similar to sea waves

7 Protected against the effects of temporary immersion

8 Protected against the effects of continual immersion

2nd number defined by the CEI EN 60529 – IEC 529 Standards

IP degree of protection

Protection against penetration of solid bodies

1st characteristic number	Brief description	Complete description
0	Unprotected	No particular protection
1	Protected against solid bodies larger than 50mm	No large surface of the human must be able to penetrate, for example a hand (voluntary protection is not provided) or solid bodies larger than 50mm in diameter.
2	Protected against solid bodies larger than 12mm	Fingers or similar objects of length not exceeding 80mm or solid bodies of diameter higher than 12 mm must not penetrate
3	Protected against solid bodies larger than 2.5mm	Tools, wires, etc. with diameter or thickness greater than 2.5mm or solid bodies with diameter greater than 2.5mm must not be able to penetrate
4	Protected against solid bodies larger than 1.0mm	Wires or plates thicker than 1.0mm or solid bodies with diameter greater than 1.0mm must not be able to penetrate
5	Protected against dust	Penetration of dust is not totally excluded, but the amount penetrating is not enough to harm correct operation of the material
6	Totally protected against dust	No penetration of dust is allowed

Protection against penetration of water

2nd characteristic number	Brief description	Complete description
0	Unprotected	No particular protection
1	Protected against vertical fall of drops of water	The drops of water which fall vertically must not cause harmful effects
2	Protected against drops of water up to 15° from vertical	The drops of water which fall vertically must not cause harmful effects when the housing is leant at any angle up to 15° in relation to its normal position
3	Protected against rain	The water which falls like rain from a direction with an angle of up to 60° to vertical must not cause harmful effects
4	Protected against the splashes of water	Water splashed over the housing from all directions must not cause harmful effects
5	Protected against jets	Water sprayed with a nozzle onto the housing from all direction must not cause harmful effects
6	Protected against waves	In the case of waves or strong jets of water, the water must not enter the housing in a harmful amount
7	Protected against the effects of temporary immersion	Water in a harmful amount must not be able to penetrate inside the housing immersed in certain pressure and duration conditions
8	Protected against the effects of continual immersion	The material is suited to remaining immersed in water in

Busbars with shaped section and flat bars

Mechanical and electrical characteristics

Compliance with CEI EN 60439-2/IEC 61439-1-2 Standard

The ArTu switchgear has undergone the type tests foreseen by the CEI EN 60439-2/IEC 61439-1-2 Standards in the ABB laboratories. The results of these tests guarantee the performances of the ArTu switchgear and, by using the ABB SACE metalwork structures and accessories, such as the modular and moulded-case circuit-breakers, allow the end switchgear constructor not to carry out any further type tests by following the selection criteria and the assembly instructions for the various components, and only carrying out the individual tests foreseen under the CEI EN 60439/IEC 61439-1-2 Standard. These results, which are indicated below, can be referred to for making out the declaration of conformity of the switchgear.

In-depth technical information

ArTu distribution switchgear

Busbars with shaped section Components

6

The busbar holders can be used both in intermediate and end positions, thanks to the special support.

Branch between 3200A busbars with shaped section and 1250/1600A busbars with shaped section.

Branch between 3200A flat busbars and 1250/1600A busbars with shaped section.

The connections can be made on each side of the busbar.

Joint for 1250-1600-2000A busbars.
Example of "T" or "L" coupling.

Direct branch by means of cable terminal for cable section up to 50mm².

Snap-on assembly between busbar holders and assembly crosspieces.

Direct connection with Unifix H system.

A self-locking hammer screw allows fixing between conductors in any position along the busbar, ensuring a large contact surface.

Branch by means of accessory.

Note
branches headed with cable terminal
with the following dimensions:

Flat busbars Components

The 25mm pitch drilling allows branching between flat busbars at any point..

Branch between pre-drilled 3200A flat busbars and 1250/1600A busbars with shaped section (only with PB1601).

Branch between flat busbar and flexible busbar by means of tightening plate.

Busbar holder for flat busbars (one busbar per phase).

Single-phase divider with possibility of connection, which can be mounted on DIN rail.

Single-phase dividers up to 400A, which can be mounted on DIN rail.

Four-pole 250A divider.

In-depth technical information

ArTu distribution switchgear

Examples of connections - Unifix H

Unifix H frame with 400A 24 and 36 module busbars

Busbar power supply from the top by means of 4P feeder module placed laterally

6

Busbar power supply from the bottom by means of 4P feeder module placed laterally

Busbar power supply from the top by means of 4P feeder module placed centrally

Busbar power supply from the top by means of main row circuitbreaker

Busbar power supply from the bottom by means of main row circuit-breaker

Covers for IP 20 degree of protection

Examples of connections - Unifix L

Unifix L frame with 100A 12/18/24 module busbars

Two different single-phase circuits on a single 24 module DIN rail

Example of main and shunted power supply

Busbar power supply by means of cable terminal placed under the head of the circuit-breaker terminal and branch with parallel module

Busbar power supply by means of power supply terminals placed centrally

Busbar power supply by means of power supply terminals placed laterally

Direct busbar power supply by means of feeder module (supplied without cables) and branch by means of feeder module
